# 1 INTRODUCTION

---

## 1.1 About This Document

This document is part of a set of reference documents providing information necessary to operate and program CompuLab CL-SOM-AM57x Computer-on-Module.

## 1.2 CL-SOM-AM57x Part Number Legend

Please refer to the CompuLab website ‘Ordering information’ section to decode the CL-SOM-AM57x part number: <http://www.compulab.com/products/computer-on-modules/cl-som-am57x-ti-am5728-am5718-system-on-module/#ordering>.

## 1.3 Related Documents

## 2 OVERVIEW

---

### 2.1 Highlights

- Texas Instruments Sitara AM57x processors, 1.5GHz
- Up to 4GB DDR3 and 32GB on-board eMMC
- PowerVR SGX544 GPU, 1080p VPU and C66x DSP
- Dual-band 802.11a/b/g/n WiFi and Bluetooth 4.1 BLE
- 2x PCIe, 2x GbE, SATA, USB3, 3x USB2, 9x UART, 87x GPIO
- Miniature size: 60 x 68 x 5 mm

CL-SOM-AM57x is a miniature System-on-Module / Computer-on-Module designed as a building block for integration into embedded applications. CL-SOM-AM57x is built around the Texas Instruments Sitara AM57x ARM Cortex-A15 System-on-Chip family. The SoC is supplemented with up-to 4GB DDR3 and 32GB of on-board eMMC storage.

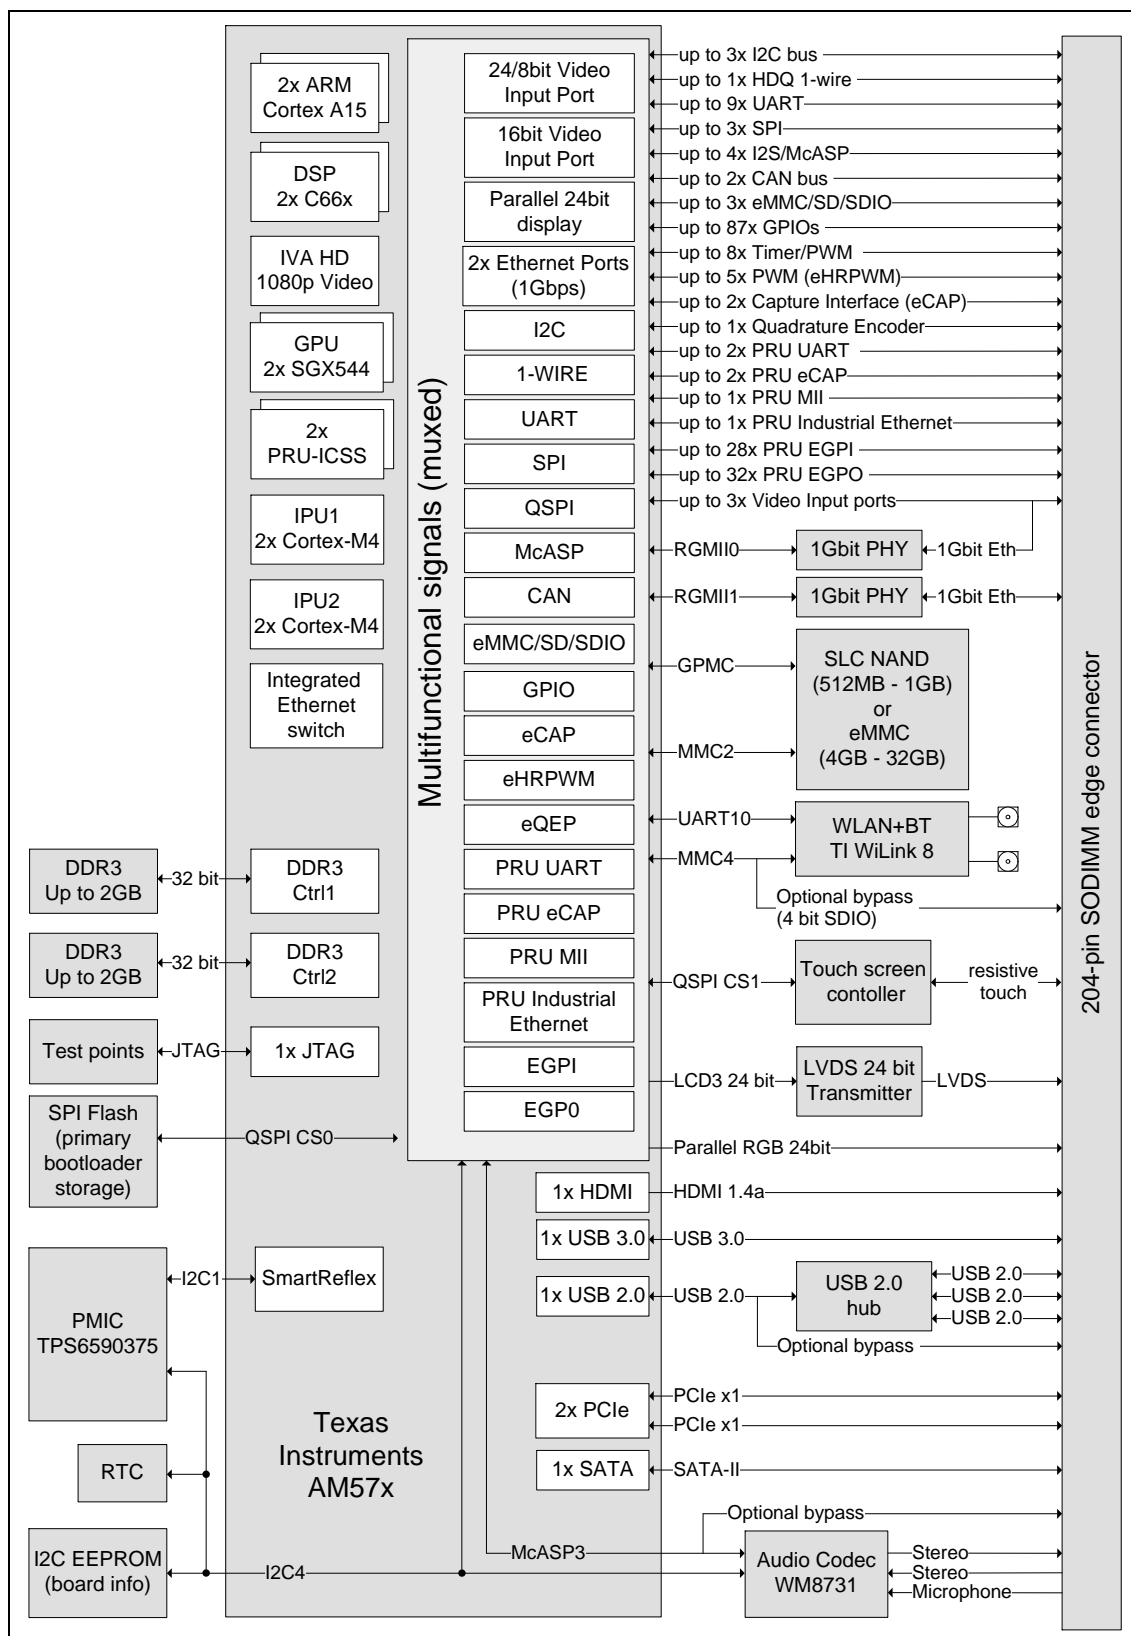

Featuring an unprecedented set of dedicated graphics acceleration and video processing engines, CL-SOM-AM57x delivers high-performance multimedia and image processing capabilities. Dual C66x DSP cores and dedicated dual-core ARM Cortex-M4 IPU make CL-SOM-AM57x a powerful platform for image and video processing systems, while dual PowerVR SGX544 GPU and IVA-HD video sub-system enable multimedia demanding applications.

Delivering a wide range of embedded interfaces and a PRU-ICSS coprocessor dedicated for real-time processing and industrial protocols, CL-SOM-AM57x is an ideal selection for industrial automation and control systems. Dual Gbit Ethernet, 2x2 MIMO dual-band 802.11a/b/g/n WiFi and Bluetooth 4.1 make CL-SOM-AM57x an excellent solution for networking, communications and IoT applications.

CL-SOM-AM57x is provided with comprehensive documentation and full ready-to-run SW packages for the Linux operating system.

## 2.2 Block Diagram

Figure 1 CL-SOM-AM57x Block Diagram

## 2.3 CL-SOM-AM57x Features

The "Option" column specifies the CoM/SoM configuration option required to have the particular feature. When a CoM/SoM configuration option is prefixed by "NOT", the particular feature is only available when the option is not used. A feature is only available when a CoM/SoM configuration complies with all options denoted in the "Option" column. "+" means that the feature is always available.

**Table 3 Features and Configuration options**

Feature	Description	Option
<b>CPU Core and Graphics</b>		
CPU	Texas Instruments Sitara AM5728 dual-core ARM Cortex-A15, 1.5GHz NEON SIMD and VFPv4	C1500D
	Texas Instruments Sitara AM5718 single-core ARM Cortex-A15, 1.5GHz. NEON SIMD and VFPv4	C1500
DSP	Up to 2x TMS320C66x DSP cores	C1500x
GPU	Up to 2x PowerVR SGX544 3D GPU cores	C1500x
	Vivante GC320 2D GPU	+
Video	IVA-HD video sub-system supporting 1080p HD decoding / encoding	+
Image Processing	2x dual-core ARM Cortex-M4 IPU, 213MHz	+
Real-Time Coprocessor	2x PRU-ICSS supporting EtherCAT, PROFIBUS, PROFINET, EtherNet/IP and Powerlink protocols	+
<b>Memory and Storage</b>		
RAM	512MB – 4GB, DDR3-1333, single / dual channel 32-bit data bus	D
Storage	On-board SLC NAND flash, 512MB – 1GB	N
	On-board eMMC flash, 4GB - 32GB	
<b>Display and Camera</b>		
Display	Parallel RGB, 24-bit, up to 1920 x 1200	+
	HDMI 1.4a, up to 1920 x 1200	+
	LVDS, up to 1920 x 1080	L
Touchscreen	On-board 4-wire resistive touch-screen controller	I
	Capacitive touch-screen support through SPI and I2C interfaces	+
Camera	Up to 3x parallel camera interfaces	+
<b>Network</b>		
Gigabit Ethernet	Up to 2x 10/100/1000Mbps Ethernet ports (MAC+PHY)	E1/E2
WiFi	802.11b/g/n WiFi interface TI WiLink 8 WL1801 chipset	W
	Dual-band 2x2 802.11a/b/g/n WiFi interface TI WiLink 8 WL1837 chipset	WAB
Bluetooth	Bluetooth 4.1 BLE	WAB
<b>Audio</b>		
Analog Audio	Audio codec with stereo output, stereo input and microphone support	A
Digital Audio	Up to 4x I2S digital audio interfaces	+
	HDMI audio output	+
<b>I/O</b>		
PCI Express	2x PCIe x1 Gen. 2	+
SATA	SATA-II, 3Gbps	+
USB	1x USB3.0 dual-role + 1x USB2.0 host	U2
	1x USB3.0 dual-role + 3x USB2.0 host	U4
Serial Ports (UARTs)	Up to 9x UART ports, 16C750 compatible, up to 12 Mbps	+
CAN bus	Up to 2x CAN bus	+
MMC/SD/SDIO	Up to 3x MMC/SD/SDIO interfaces	+
SPI	Up to 3x SPI bus interfaces	+
I2C	Up to 3x I2C interfaces	+
1-Wire	1-Wire interface	+
Timer/PWM	Up to 8x Timer/PWM outputs	+
GPIO	Up to 87x GPIO signals (shared with other functions)	+
<b>System Logic</b>		
RTC	Real time clock, powered by external lithium battery	+

**Table 4 Electrical, Mechanical and Environmental Specifications**

Electrical Specifications	
Supply Voltage	4.2V to 5V
Digital I/O voltage	3.3V
Active power consumption	2.5 – 6.5 W, depending on board configuration and system workload
Mechanical Specifications	
Dimensions	60 x 68 x 5 mm
Weight	35 gram
Connectors	204-pin SO-DIMM edge connector
Environmental and Reliability	
MTTF	> 200,000 hours
Operation temperature (case)	Commercial: 0° to 70° C
	Extended: -20° to 70° C
	Industrial: -40° to 85° C
Storage temperature	-40° to 85° C
Relative humidity	10% to 90% (operation)
	05% to 95% (storage)
Shock	50G / 20 ms
Vibration	20G / 0 - 600 Hz

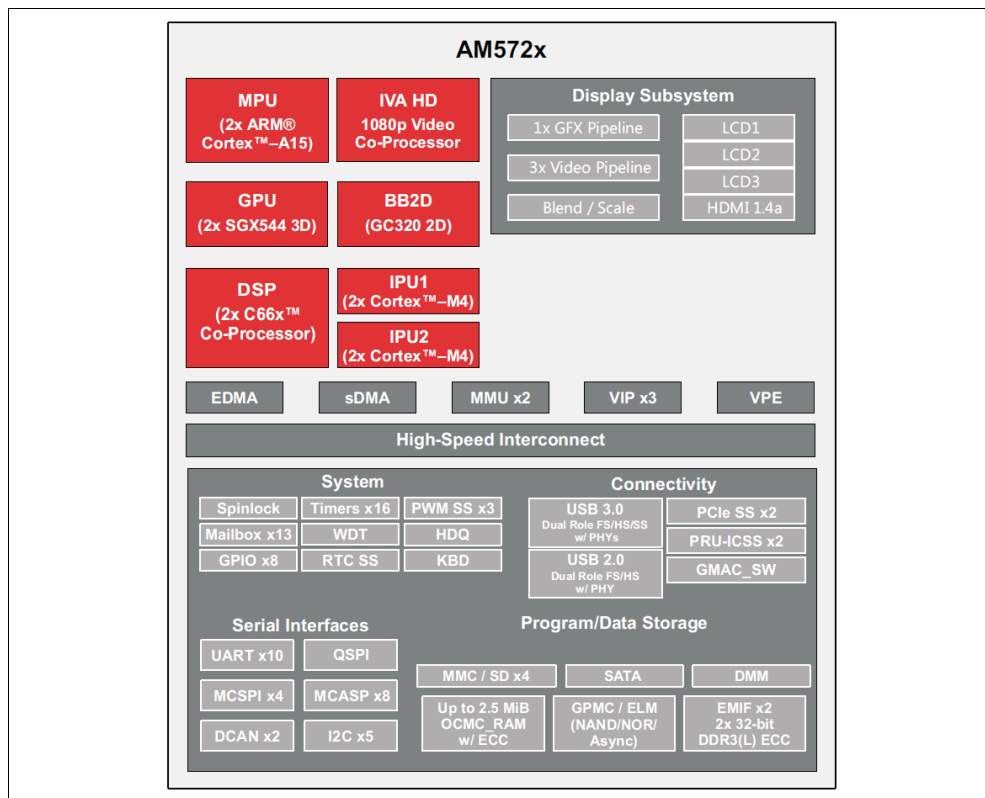

### 3 CORE SYSTEM COMPONENTS

#### 3.1 AM57x SoC

The TI Sitara AM57x system-on-chip (SoC) is built around dual-core ARM Cortex-A15 CPU. Dual C66x VLIW DSP cores and dedicated ARM Cortex-M4 IPU make AM572x a powerful platform for image and video processing systems, while dual PowerVR SGX544 GPU and IVA-HD video subsystem enable multimedia demanding applications.

- Up to 1500-MHz Sitara™ ARM® Single/Dual Cortex®-A15 32-Bit RISC processor
  - NEON™ SIMD Coprocessor and Vector Floating Point (VFPv4) per CPU
  - 32-KiB instruction and 32-KiB data level 1 (L1) cache per CPU
  - Shared 1-MiB/2-MiB level 2 (L2) cache
  - On-Chip 512KiB/2.5MiB Shared Memory (RAM)
  - 48-KiB bootable ROM
- Up to 2 C66x™ Floating-Point VLIW DSP
- Image and video accelerator high-definition (IVA-HD) subsystem
- Two ARM® Dual Cortex®-M4 Image Processing Units (IPUs)
- Single/Dual-Core PowerVR® SGX544™ 3D GPU
- 2D-Graphics Accelerator (BB2D) Subsystem, including Vivante™ GC320 Core
- Crypto Hardware Accelerators (AES, SHA, RNG, DES and 3DES)
- Two dual-core Programmable Real-time Unit and Industrial Communication Subsystems (PRUICSS)

**Figure 2 AM572x Block Diagram**

### 3.1.1 DSP Subsystem

The AM57x SoC includes up to two identical instances (DSP1 and DSP2) of a digital signal processor (DSP), based on the TI's standard TMS320C66x™ DSP CorePac core.

Each of the two DSP subsystems integrated in the device includes the following components:

- A TMS320C66x™ CorePac DSP core
- Dedicated enhanced data memory access engine – EDMA
- A level 2 (L2) interconnect network (DSP NoC)
- Two memory management units (on EDMA L2 interconnect and DSP MDMA paths)
- Dedicated system control logic (DSP\_SYSTEM)

### 3.1.2 Dual Cortex-M4 IPU Subsystem

The AM57x SoC instantiates two dual Cortex™-M4 image processor unit (IPU) subsystems:

- IPU1 subsystem is available for general purpose usage
- IPU2 subsystem is dedicated to IVA support and is not available for other processing

Each IPU subsystem integrates the following:

- Two ARM Cortex-M4 microprocessors
  - ARMv7-M and Thumb@-2 instruction set architecture (ISA)
  - ARMv6 SIMD and digital signal processor (DSP) extensions
  - Single-cycle MAC
  - Integrated nested vector interrupt controller (NVIC)
  - Integrated bus matrix
- Unicache interface
- Level 2 (L2) master interface (MIF) splitter
- On-chip ROM and banked RAM memory

### 3.1.3 Display Subsystem

The AM57x display subsystem provides the control signals required to interface the device system memory frame buffer (SDRAM) directly to the displays. It supports hardware cursor, independent gamma curve on all interfaces, multiple-buffer, and programmable color phase rotation.

### 3.1.4 3D Graphics Accelerator

The AM57x 3D graphics processing unit (GPU) accelerates 2-dimensional (2D) and 3-dimensional (3D) graphics and compute applications. It is based on the POWERVR® SGX544 core from Imagination Technologies which includes the following key features:

- 2D and 3D graphics
- API support for industry standards: OpenGL® - ES 1.1 and 2.0
- Multicore GPU architecture (with SGX544-MP2 core)
- Tile-based deferred rendering architecture
- Universal Scalable Shader Engine (USSE™)
- Present and texture load accelerator (PTLA)

### 3.1.5 2D Graphics Accelerator

The 2D graphics accelerator subsystem accelerates 2D graphics applications. The 2D graphics accelerator subsystem is based on the GC320 2D GPU core from Vivante Corporation. The hardware acceleration is brought to numerous 2D applications, including on-screen display and touch screen user interfaces, graphical user interfaces (GUIs) and menu displays, flash animation, and gaming. The GC320 2D Main Features include the following:

- API support:
  - OpenWF™, DirectFB
  - GDI/DirectDraw™
- BB2D architecture
- Hardware acceleration for DirectFB

### 3.1.6 PRU-ICSS

There are two Programmable Real-time Unit and Industrial Communication Subsystems (PRU-ICSS) in the device. The PRU-ICSS enables additional peripheral interfaces and real-time protocols such as EtherCAT, PROFINET, EtherNet/IP, PROFIBUS, Ethernet Powerlink, Sercos and others.

Each PRU-ICSS consists of dual 32-bit RISC cores (Programmable Real-Time Units, or PRUs), shared data and instruction memories, internal peripheral modules, and an interrupt controller (INTC). The programmable nature of the PRU cores, along with their access to pins, events and all device resources, provides flexibility in implementing fast real-time responses, specialized data handling operations, custom peripheral interfaces, and in offloading tasks from the other processor cores of the device. The PRU-ICSS Key Features are:

- Supports Protocols such as EtherCAT, PROFINET, EtherNet/IP, PROFIBUS, Ethernet Powerlink, Sercos and more
- Two Programmable Real-Time Units (PRUs) Subsystems With Two PRU Cores Each
  - Each Core is a 32-bit load/store RISC CPU core
  - 12-KiB program RAM per PRU CPU
  - 8-KiB data RAM per PRU CPU
  - Enhanced General-Purpose Inputs (EGPI) and Enhanced General-Purpose Outputs (EGPO)
- 32-KiB general purpose memory RAM (signified RAM2) shared between PRU0 and PRU1
- Peripherals Inside the PRU-ICSS:
  - One Ethernet MII\_RT module
  - One MDIO Port
  - Industrial Ethernet Peripheral (IEP)
  - 16550-compatible UART with a dedicated 192-MHz clock to support 12-Mbps PROFIBUS
  - Industrial Ethernet timer with 7/9 capture and 8 compare events
  - Enhanced Capture Module (ECAP)
  - Interrupt Controller

## 3.2 Memory

### 3.2.1 DRAM

AM5728 includes two 32-bit DDR controllers (EMIF1 and EMIF2). AM5718 includes one 32-bit DDR controller (EMIF1).

CL-SOM-AM57x is equipped with up to 4GB of onboard DDR3 memory. The DDR3 data bus is 32-bits wide and operates at 533 MHz clock frequency (DDR3-1066).

---

**NOTE: 2GB and 4GB DDR3 memory capacities are available with C1500D option only.**

---

### 3.2.2 Bootloader Storage

CL-SOM-AM57x is assembled with 2MBytes of SPI NOR flash. The SPI NOR flash is used for boot-loader and configuration blocks storage.

### 3.2.3 General Purpose Storage

CL-SOM-AM57x is available with optional on-board storage designed to store the operating system and user data. One of the following storage devices can be used as the main on-board storage:

- eMMC flash (up to 32GB).
- SLC NAND Flash (up to 1GB).

---

**NOTE: SLC NAND and eMMC are mutually exclusive configuration options.**

---

## 4 PERIPHERAL INTERFACES

CL-SOM-AM57x implements a variety of peripheral interfaces through the SODIMM-204 carrier board connector. The following notes apply to interfaces available through the SODIMM-204 interface:

- Some interfaces/signals are available only with/without certain configuration options of CL-SOM-AM57x. The availability restrictions of each signal are described in the “Signal description” table for each interface.
- Many of the CL-SOM-AM57x carrier board interface pins are multifunctional. Up-to 16 functions (ALT modes) are accessible through each multifunctional pin. Multifunctional pins are denoted with an asterisk (\*). For additional details, please refer to chapter 5.5 of this document.
- Only one multifunctional pin can be used for each function, configuring several multifunctional pins to implement the same function will result in unexpected system behavior.
- All of the CL-SOM-AM57x digital interfaces operate at 3.3V voltage levels, unless otherwise noted.

The signals for each interface are described in the “Signal description” table for the interface in question. The following notes provide information on the “Signal description” tables:

- **“Signal name”** – The name of each signal with regards to the discussed interface. The signal name corresponds to the relevant function in cases where the carrier board pin in question is multifunctional.
- **“Pin#”** – The carrier board interface pin number where the discussed signal is available, multifunctional pins are denoted with an asterisk.
- **“Type”** – Signal type, see the definition of different signal types below
- **“Description”** – Signal description with regards to the interface in question.
- **“Availability”** – Depending on CL-SOM-AM57x Configuration options, certain carrier board interface pins are physically disconnected (floating) from the carrier board interface connector on-board CL-SOM-AM57x. The “Availability” column summarizes configuration requirements for each signal. All the listed requirements must be met (logical AND) for a signal to be “available” unless otherwise noted.

Each described signal can be one of the following types. Signal type is noted in the “Signal description” tables. Multifunctional pin direction, pull resistor and open drain functionality is software controlled. The “Type” column header for multifunctional pins refers to the recommended pin configuration with regards to the discussed signal.

- **“AI”** – Analog Signal Input
- **“AO”** – Analog Signal Output
- **“AIO”** – Analog Signal Input/Output
- **“APO”** – Analog Power Output
- **“API”** – Analog Power Input
- **“I”** – Digital Input
- **“O”** – Digital Output
- **“IO”** – Digital Input/Output
- **“IOD”** – Open Drain Signal (not pulled up on-board CL-SOM-AM57x unless otherwise noted).
- **“DS”** – Differential Signaling
- **“PWR”** – Power
- **“SPU”** – Software controlled pull up to 3.3V
- **“SPD”** – Software controlled pull down to GND

- **"PU18"** – Always pulled up to 1.8V on-board CL-SOM-AM57x, (typ. 5K $\Omega$ -15K $\Omega$ ).
- **"PU33"** – Always pulled up to 3.3V on-board CL-SOM-AM57x, (typ. 5K $\Omega$ -15K $\Omega$ ).
- **"PUSUPPLY"** – Always pulled up to 3.8V - 5.25V on-board CL-SOM-AM57x, (typ. 5K $\Omega$ -15K $\Omega$ ).
- **"PD"** - Always pulled down on-board CL-SOM-AM57x, (typ. 5K $\Omega$ -15K $\Omega$ ).

## 4.1 Display Interface

CL-SOM-AM57x display interface is derived from the AM57x display subsystem. The display subsystem key features are:

- Support of hardware cursor, independent gamma curve on all interfaces, multiple-buffer, and programmable color phase rotation
- Display controller:
  - Three video pipelines, one graphic pipeline, and one write-back pipeline
  - Three LCD outputs, each one with dedicated overlay manager, for support of active matrix color displays (up to 24-bit interface)
  - One TV output with dedicated overlay manager to support HDMI v1.4a interface (1080p @ 60 fps video and multichannel audio)

For additional details on display subsystem, please refer to the Sitara AM57x technical reference manual.

### 4.1.1 Parallel Display interface

CL-SOM-AM57x display interface is derived from the AM57x display subsystem. The display subsystem key features are:

- Support of hardware cursor, independent gamma curve on all interfaces, multiple-buffer, and programmable color phase rotation
- Display controller:
  - Three video pipelines, one graphic pipeline, and one write-back pipeline
  - Three LCD outputs, each one with dedicated overlay manager, for support of active matrix color displays (up to 24-bit interface)
  - One TV output with dedicated overlay manager to support HDMI v1.4a interface (1080p @ 60 fps video and multichannel audio)

CL-SOM-AM57x provides access to the main LCD output (DPI1), referred in Sitara AM57x technical reference manual as "VOUT1". The main features of VOUT1 interface are:

- 24-bit parallel CMOS output interface (DPI) (MIPI DPI 2.0, BT-656, or BT-1120)
- Supporting up to WUXGA (1920 x 1200) with reduced blanking periods.

For additional details on display subsystem, please refer to the Sitara AM57x technical reference manual. The table below summarizes the Parallel display interface signals

**Table 5 Parallel display Interface Signals**

Signal Name	Pin #	Type	Description	Availability
VOUT1_CLK	98*	O	Video Output 1 Clock output	Always
VOUT1_D0	106*	O	Video Output 1 Data output	Always
VOUT1_D1	108*	O	Video Output 1 Data output	Always
VOUT1_D10	128*	O	Video Output 1 Data output	Always
VOUT1_D11	130*	O	Video Output 1 Data output	Always
VOUT1_D12	134*	O	Video Output 1 Data output	Always
VOUT1_D13	136*	O	Video Output 1 Data output	Always
VOUT1_D14	138*	O	Video Output 1 Data output	Always
VOUT1_D15	140*	O	Video Output 1 Data output	Always
VOUT1_D16	94*	O	Video Output 1 Data output	Always
VOUT1_D17	92*	O	Video Output 1 Data output	Always
VOUT1_D18	142*	O	Video Output 1 Data output	Always
VOUT1_D19	144*	O	Video Output 1 Data output	Always
VOUT1_D2	110*	O	Video Output 1 Data output	Always
VOUT1_D20	146*	O	Video Output 1 Data output	Always
VOUT1_D21	148*	O	Video Output 1 Data output	Always
VOUT1_D22	74*	O	Video Output 1 Data output	Always
VOUT1_D23	76*	O	Video Output 1 Data output	Always
VOUT1_D3	112*	O	Video Output 1 Data output	Always

Signal Name	Pin #	Type	Description	Availability
VOUT1_D4	116*	O	Video Output 1 Data output	Always
VOUT1_D5	118*	O	Video Output 1 Data output	Always
VOUT1_D6	120*	O	Video Output 1 Data output	Always
VOUT1_D7	122*	O	Video Output 1 Data output	Always
VOUT1_D8	124*	O	Video Output 1 Data output	Always
VOUT1_D9	126*	O	Video Output 1 Data output	Always
VOUT1_DE	104*	O	Video Output 1 Data Enable output	Always
VOUT1_FLD	161*	O	Video Output 1 Field ID output. This signal is not used for embedded sync modes.	Always
VOUT1_HSYNC	100*	O	Video Output 1 Horizontal Sync output. This signal is not used for embedded sync modes.	Always
VOUT1_VSYNC	102*	O	Video Output 1 Vertical Sync output. This signal is not used for embedded sync modes.	Always

---

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

---

### 4.1.2 HDMI Interface

CL-SOM-AM57x HDMI interface is derived from the Sitara AM57x HDMI module. The HDMI module converts the RGB video into standard high-definition digital video format. The HDMI module provides the following key features:

- HDMI 1.4a (1080p @ 60 fps video and multichannel audio)
  - HDMI 1.4a and DVI 1.0 compliant
  - 36-bit RGB color
  - HDCP 1.4 key protection
  - Deep color mode support (10-bit/12-bit for 148.5-MHz pixel clock)

Please refer to the AM57x Reference manual for additional details. The table below summarizes the HDMI interface signals

**Table 6 HDMI Interface Signals**

Signal Name	Pin #	Type	Description	Availability
HDMI1_CEC	34*	IOD	HDMI consumer electronic control	Always
HDMI1_CEC	56	IOD	HDMI consumer electronic control	With "C1500"
HDMI1_CLOCKX	30	ODS	HDMI clock differential positive or negative	Always
HDMI1_CLOCKY	32	ODS	HDMI clock differential positive or negative	Always
HDMI1_DATA0X	36	ODS	HDMI data 0 differential positive or negative	Always
HDMI1_DATA0Y	38	ODS	HDMI data 0 differential positive or negative	Always
HDMI1_DATA1X	42	ODS	HDMI data 1 differential positive or negative	Always
HDMI1_DATA1Y	44	ODS	HDMI data 1 differential positive or negative	Always
HDMI1_DATA2X	48	ODS	HDMI data 2 differential positive or negative	Always
HDMI1_DATA2Y	50	ODS	HDMI data 2 differential positive or negative	Always
HDMI1_DDC_SCL	25*	IOD	HDMI display data channel clock	Always
HDMI1_DDC_SDA	31*	IOD	HDMI display data channel data	Always
HDMI1_HPD	40*	I	HDMI display hot plug detect	Always
HDMI1_HPD	54	I	HDMI display hot plug detect	With "C1500"

---

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

---

### 4.1.3 LVDS Display interface

LVDS interface is derived from an on-board SN75LVDS83B FlatLink™ transmitter. The transmitter is interfaced with the AM57x Parallel RGB interface "vout3". The LVDS transmitter supports the following key features:

- Transfer rate up to 135 Mpps, pixel clock frequency range 10 MHz to 135 MHz
- Suited for display resolutions ranging from HVGA up to HD with low EMI
- Operates From a Single 3.3-V Supply

---

**NOTE: CL-SOM-AM57x LVDS display interface is available only with the 'L' and 'C1500D' ordering option.**

---

For additional details on the LVDS Transmitter, please refer to the TI SN75LVDS83B datasheet. The table below summarizes the LVDS interface signals

**Table 7 LVDS Interface Signals**

Signal Name	Pin #	Type	Description	Availability
LVDS_CLKN	33	ODS	Differential LVDS pixel clock output, high-impedance when device in SHTDN	With "C1500D" AND "L"
LVDS_CLKP	35	ODS	Differential LVDS pixel clock output, high-impedance when device in SHTDN	With "C1500D" AND "L"
LVDS_N0	41	ODS	Differential LVDS data output, high-impedance when device in SHTDN	With "C1500D" AND "L"
LVDS_N1	47	ODS	Differential LVDS data output, high-impedance when device in SHTDN	With "C1500D" AND "L"
LVDS_N2	53	ODS	Differential LVDS data output, high-impedance when device in SHTDN	With "C1500D" AND "L"
LVDS_N3	59	ODS	Differential LVDS data output, high-impedance when device in SHTDN	With "C1500D" AND "L"
LVDS_P0	39	ODS	Differential LVDS data output, high-impedance when device in SHTDN	With "C1500D" AND "L"
LVDS_P1	45	ODS	Differential LVDS data output, high-impedance when device in SHTDN	With "C1500D" AND "L"
LVDS_P2	51	ODS	Differential LVDS data output, high-impedance when device in SHTDN	With "C1500D" AND "L"
LVDS_P3	57	ODS	Differential LVDS data output, high-impedance when device in SHTDN	With "C1500D" AND "L"

## 4.2 Parallel Camera Interface

The camera interface available with CL-SOM-AM57x is based on the AM57x integrated Video Input Port (VIP) modules.

---

**NOTE: All of the Camera interface pins on CL-SOM-AM57x are multifunctional. For additional details please refer to [chapter 5.5](#) of this document.**

---

With C1500D option (AM5728) there are 3 instantiations of the VIP (VIP1, VIP2, and VIP3) for connection to CCD cameras or BT656 compliant video encoders. On CL-SOM-AM57x based on "C1500D" the following main features are supported:

- VIP1 module with support of:
  - One 8-bit video port for parallel RGB/YUV/RAW data, up to 165 MHz
- VIP2 module with support of:
  - One 24-bit video port for parallel RGB/YUV/RAW data, up to 165 MHz
  - One 8-bit (out of 24) video port for parallel RGB/YUV/RAW data, up to 165 MHz
- VIP3 module with support of:
  - One 16-bit video port for parallel RGB/YUV/RAW data, up to 165 MHz

With C1500 option (AM5718) there is one instantiations of the VIP (VIP1) for connection to CCD cameras or BT656 compliant video encoders. On CL-SOM-AM57x based on "C1500" the following main features are supported:

- One separate 24-bit video ports for parallel RGB/YUV/RAW data, up to 165 MHz
- One separate 8-bit video ports for YUV/RAW data, up to 165 MHz

For additional details on VIP modules, please refer to the AM572x or AM571x technical reference manual. The tables below summarize the Parallel camera interface signals

**Table 8 Parallel camera VIN1A Interface Signals**

Signal Name	Pin #	Type	Description	Availability
VIN1A_CLK0	49*	I	Video Input 1 Port A Clock input	With "C1500"
VIN1A_CLK0	161*	I	Video Input 1 Port A Clock input	With "C1500"
VIN1A_CLK0	193*	I	Video Input 1 Port A Clock input	With "C1500" AND Without "A"
VIN1A_CLK0	95*	I	Video Input 1 Port A Clock input	With "C1500"

## 4.3 PCI Express

CL-SOM-AM57x PCI Express interface is derived from the AM57x integrated PCIe module. Two instances of the PCIe are available. Two operation modes are supported with CL-SOM-AM57x:

- A single controller with two lanes (PCIe\_SS1 only)
- Two separate controllers with one lane each

Each PCI Express interface supports the following features:

- Each PCIe subsystem controller has support for PCIe 2.0 mode (5.0 Gbps per lane) and 1.0 mode (2.5 Gbps per lane)
- Supports either root complex (RC) or in end point (EP) PCIe mode
- Complies with PCI local bus specification v3.0 and PCI express base standard v3.0
- Support of EP legacy mode
- Legacy PCI Interrupts reception (RC) and generation (EP)
- Automatic Lane reversal as specified in the PCI Express standard 2.0 specification (transmit and receive)

For additional details on PCI Express modules, please refer to the AM572x or AM571x technical reference manual. The table below summarizes the PCIe interface signals

**Table 14 PCIe Interface Signals**

Signal Name	Pin #	Type	Description	Availability
LJCB_CLKN	121	IODS	PCIe1_PHY / PCIe2_PHY shared Reference Clock Input / Output Differential Pair (negative)	Always
LJCB_CLKP	119	IODS	PCIe1_PHY / PCIe2_PHY shared Reference Clock Input / Output Differential Pair (positive)	Always
PCIE_RXN0	133	IDS	PCIe1_PHY_RX Receive Data Lane 0 (negative) - mapped to PCIe_SS1 only	Always
PCIE_RXN1	167	IDS	PCIe2_PHY_RX Receive Data Lane 1 (negative) - mapped to either PCIe_SS1 (dual lane- mode) or PCIe_SS2 (single lane- mode)	With "C1500D"
PCIE_RXN1	184	IDS	PCIe2_PHY_RX Receive Data Lane 1 (negative) AM5718 ONLY	With "C1500"
PCIE_RXP0	131	IDS	PCIe1_PHY_RX Receive Data Lane 0 (positive) - mapped to PCIe_SS1 only	Always
PCIE_RXP1	169	IDS	PCIe2_PHY_RX Receive Data Lane 1 (positive) - mapped to either PCIe_SS1 (dual lane- mode) or PCIe_SS2 (single lane- mode)	With "C1500D"
PCIE_RXP1	182	IDS	PCIe2_PHY_RX Receive Data Lane 1 (positive) AM5718 ONLY	With "C1500"
PCIE_TXN0	127	ODS	PCIe1_PHY_TX Transmit Data Lane 0 (negative) - mapped to PCIe_SS1 only	Always
PCIE_TXN1	173	ODS	PCIe2_PHY_TX Transmit Data Lane 1 (negative) - mapped to either PCIe_SS1 (dual lane- mode) or PCIe_SS2 (single lane- mode)	With "C1500D"
PCIE_TXN1	190	ODS	PCIe2_PHY_TX Transmit Data Lane 1 (negative) AM5718 ONLY	With "C1500"
PCIE_TXP0	125	ODS	PCIe1_PHY_TX Transmit Data Lane 0 (positive) - mapped to PCIe_SS1 only	Always
PCIE_TXP1	175	ODS	PCIe2_PHY_TX Transmit Data Lane 1 (positive) - mapped to either PCIe_SS1 (dual lane- mode) or PCIe_SS2 (single lane- mode)	With "C1500D"
PCIE_TXP1	188	ODS	PCIe2_PHY_TX Transmit Data Lane 1 (positive) AM5718 ONLY	With "C1500"

## 4.4 SATA

CL-SOM-AM57x incorporates one SATA-2 (3-Gbps) interface. The SATA controller supports the following key features:

- Serial ATA 1.5-Gbps and 3-Gbps speeds (SATA-1 and SATA-2)
- Support of all SATA power management features
- HBA port associated Internal DMA engine
- Activity LED generation

For additional details on the SATA subsystem, please refer to the Sitara AM57x technical reference manual. The table below summarizes the SATA interface signals

**Table 15 SATA Interface Signals**

Signal Name	Pin #	Type	Description	Availability
SATA1_LED	181*	O	SATA channel activity indicator	Always
SATA1_LED	56*	O	SATA channel activity indicator	Always
SATA1_RXN0	29	IDS	SATA differential negative receiver lane 0	Always
SATA1_RXP0	27	IDS	SATA differential positive receiver lane 0	Always
SATA1_TXN0	23	ODS	SATA differential negative transmitter lane 0	Always
SATA1_TXP0	21	ODS	SATA differential positive transmitter lane 0	Always

---

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

---

## 4.5 USB 3.0

USB3.0 interface is derived from the Sitara AM57x SuperSpeed (SS) USB 3.0 Dual-Role-Device (DRD) subsystem. USB 3.0 DRD subsystem supports following features:

- Integrated SS (USB3.0) PHY and HS/FS (USB2.0) PHY
- Supports USB Peripheral (or Device) mode at speeds SS (5Gbps), HS, FS, and LS.
- Supports USB Host mode at speeds SS (5Gbps), HS, FS, and LS.
- USB static peripheral operation
- USB static host operation
- Flexible stream allocation
- Stream priority

The table below summarizes the USB 3.0 interface signals

**Table 16 USB 3.0 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
USB_RXN0	184	IDS	USB1 USB3.0 receiver negative lane	Always
USB_RXP0	182	IDS	USB1 USB3.0 receiver positive lane	Always
USB_TXN0	190	ODS	USB1 USB3.0 transmitter negative lane	Always
USB_TXP0	188	ODS	USB1 USB3.0 transmitter positive lane	Always
USB1_DM	178	IODS	USB1 USB2.0 differential signal pair (negative)	Always
USB1_DP	176	IODS	USB1 USB2.0 differential signal pair (positive)	Always
USB1_DRVVBUS	200*	O	USB1 Drive VBUS signal	Always
USBOTG_ID	174*	I	USB1 USBOTG_ID signal	Always

---

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

---

## 4.6 USB2.0 ports

USB2.0 interface is derived from the Sitara AM57x High-Speed (HS) USB 2.0 Dual-Role-Device (DRD) subsystem. USB 2.0 DRD subsystem supports following features:

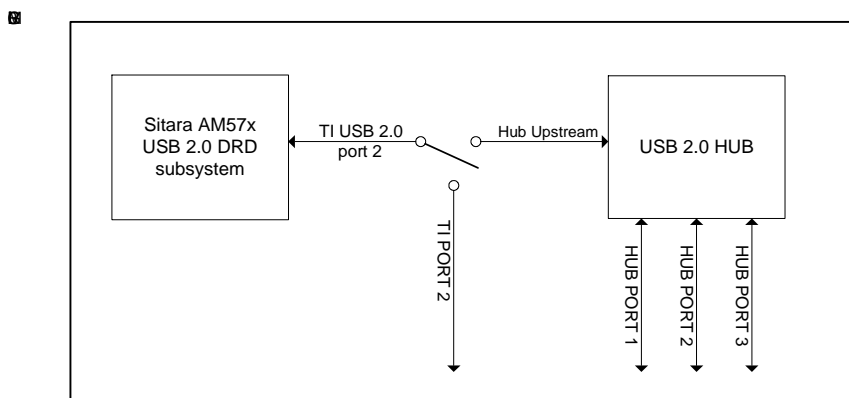

- Integrated HS/FS PHY
- Supports USB Peripheral (or Device) mode at speeds HS(480 Mbps), FS, and LS.
- Supports USB Host mode at speeds HS(480 Mbps), FS, and LS.
- USB static peripheral operation
- USB static host operation

In addition to the AM57x integrated USB2.0 DRD subsystem, the CL-SOM-AM57x is equipped with a USB2.0 hub, providing three downstream host ports. The implementation of USB2.0 hub precludes access to AM57x integrated USB2.0 DRD subsystem. The hub supports following features:

- Compliant with USB 2.0 specification
- Three downstream ports
- Downstream ports are backward compatible with FS, LS

For additional details on USB2.0 DRD subsystem of the Sitara AM57x, please refer to the AM57x technical reference manual.

**Figure 3 SOM-AM572x USB2.0 sub-system**

Please refer to the AM57x Reference manual for additional details. The table below summarizes the USB interface signals

**Table 17 USB Interface Signals**

Signal Name	Pin #	Type	Description	Availability
HUB_USB_OCN	162	I	Active LOW Overcurrent Condition Detection Input. 100K Pull Up onboard SOM-AM57x.	With "U4"
HUB_USB_PWREN	156	O	Power Switch Driver Output. 10KΩ Pull Up onboard SOM-AM57x.	With "U4"
HUBUSB1_DN	170	IODS	Downstream Port 1 differential signal pair (negative)	With "U4"
HUBUSB1_DP	172	IODS	Downstream Port 1 differential signal pair (positive)	With "U4"
HUBUSB2_DN	164	IODS	Downstream Port 2 differential signal pair (negative)	With "U4"
HUBUSB2_DP	166	IODS	Downstream Port 2 differential signal pair (positive)	With "U4"
HUBUSB3_DN	158	IODS	Downstream Port 3 differential signal pair (negative)	With "U4"
HUBUSB3_DP	160	IODS	Downstream Port 3 differential signal pair (positive)	With "U4"
USB2_DM	170	IODS	USB2 USB2.0 differential signal pair (negative)	With "U2"
USB2_DP	172	IODS	USB2 USB2.0 differential signal pair (positive)	With "U2"
USB2_DRVVBUS	156	O	USB2 Drive VBUS signal. 10KΩ Pull Up onboard SOM-AM57x.	With "U2"

## 4.7 Ethernet

CL-SOM-AM57x incorporates two full-featured 10/100/1000 ethernet ports implemented with the two MACs built into the AM57x SoC, coupled with two AR8033 RGMII Ethernet PHYs from Atheros. Both ethernet interfaces support the following main features:

- 10/100/1000 BASE-T IEEE 802.3 compliant
- Wire rate switching (802.1d)
- Support for IEEE 1588 Clock Synchronization (2008 Annex D and Annex F) - inside the MAC
- Full duplex mode supported in 10/100/1000 Mbps. Half-duplex mode supported only in 10/100 Mbps
- Automatic channel swap (ACS)
- Automatic MDI/MDIX crossover
- Automatic polarity correction
- IEEE 802.3u compliant Auto-Negotiation

---

**NOTE: CL-SOM-AM57x primary Ethernet port is available only with the ‘E2’ or ‘E1’ ordering options.**

**NOTE: CL-SOM-AM57x secondary Ethernet port is available only with ‘E2’ ordering option.**

---

Please refer to the AM57x and the Atheros AR8033 respective reference manuals for additional details. The tables below summarize the Ethernet interface signals

**Table 18 Ethernet0 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
ETH0_LED_ACT	107	IO	Active High, activity LED driver, fixed 2.5V logic. 10KΩ Pull Down onboard SOM-AM57x	With "E2"
ETH0_LED_LINK10_100	97	IO	Active High, 10/100 link LED driver, fixed 2.5V logic. 10KΩ Pull Down onboard SOM-AM57x	With "E2"
ETH0_LED_LINK1000	109	IO	Active High, 1Gbps link LED driver, fixed 2.5V logic.	With "E2"
ETH0_MDI0N	83	AIO	Negative part of 100ohm diff-pair 0	With "E2"
ETH0_MDI0P	85	AIO	Positive part of 100ohm diff-pair 0	With "E2"
ETH0_MDI1N	77	AIO	Negative part of 100ohm diff-pair 1	With "E2"
ETH0_MDI1P	79	AIO	Positive part of 100ohm diff-pair 1	With "E2"
ETH0_MDI2N	89	AIO	Negative part of 100ohm diff-pair 2	With "E2"
ETH0_MDI2P	91	AIO	Positive part of 100ohm diff-pair 2	With "E2"
ETH0_MDI3N	101	AIO	Negative part of 100ohm diff-pair 3	With "E2"
ETH0_MDI3P	103	AIO	Positive part of 100ohm diff-pair 3	With "E2"

**Table 19 Ethernet1 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
ETH1_LED_ACT	4	IO	Active High, activity LED driver, fixed 2.5V logic. 10KΩ Pull Down onboard SOM-AM57x	With "E1" OR "E2"
ETH1_LED_LINK10_100	22	IO	Active High, 10/100 link LED driver, fixed 2.5V logic. 10KΩ Pull Down onboard SOM-AM57x	With "E1" OR "E2"
ETH1_LED_LINK1000	16	IO	Active High, 1Gbps link LED driver, fixed 2.5V logic.	With "E1" OR "E2"
ETH1_MDI0N	6	AIO	Negative part of 100ohm diff-pair 0	With "E1" OR "E2"
ETH1_MDI0P	8	AIO	Positive part of 100ohm diff-pair 0	With "E1" OR "E2"

Signal Name	Pin #	Type	Description	Availability
ETH1_MDI1N	12	AIO	Negative part of 100ohm diff-pair 1	With "E1" OR "E2"
ETH1_MDI1P	14	AIO	Positive part of 100ohm diff-pair 1	With "E1" OR "E2"
ETH1_MDI2N	18	AIO	Negative part of 100ohm diff-pair 2	With "E1" OR "E2"
ETH1_MDI2P	20	AIO	Positive part of 100ohm diff-pair 2	With "E1" OR "E2"
ETH1_MDI3N	24	AIO	Negative part of 100ohm diff-pair 3	With "E1" OR "E2"
ETH1_MDI3P	26	AIO	Positive part of 100ohm diff-pair 3	With "E1" OR "E2"

## 4.8 Wireless Interfaces

CL-SOM-AM57x optional wireless communication capabilities are implemented with one of the following two assembly options:

- 2.4GHz WiFi only capability, Implemented with the “W” ordering option of CL-SOM-AM57x. Please refer to WLAN Only section for additional details.
- Dual-Band WiFi and Bluetooth capabilities, Implemented with the “WAB” ordering option of CL-SOM-AM57x. Please refer to Dual Band WLAN & Bluetooth section for additional details.

CL-SOM-AM57x is equipped with up-to two U.FL high frequency connectors allowing easy integration with external antennas:

- Primary WLAN/BT antenna connector J1. Can be used with any type of 2.4GHz/5.0GHz antenna for WLAN & Bluetooth functionality. J1 is available with either “W” or “WAB” ordering options of CL-SOM-AM57x.
- Secondary WLAN antenna connector J2. Can be used with any type of 2.4GHz/5.0GHz antenna for Dual-Band WLAN functionality. J2 is only available with the “WAB” ordering option of CL-SOM-AM57x.

**Table 20 J1 & J2 U.FL connector data**

Manufacturer	Mfg. P/N	Mating Connector
Hirose	U.FL-R-MT(10)	Hirose U.FL-LP-040

### 4.8.1 WLAN Only

CL-SOM-AM57x simple WLAN Only capabilities are based on the optional Texas Instruments WL1801MOD WLAN module soldered onboard.

WL1801MOD is a WiLink™ 8 based Single-Band combo module enabling Wi-Fi® functionality with CL-SOM-AM57x. WL1801MOD supports the following features:

- FCC, IC, ETSI/CE, and TELEC modular certification.
- Support of IEEE Std 802.11a, 802.11b, 802.11g and 802.11n.
- 20- and 40-MHz SISO and 20-MHz 2 x 2 MIMO at 2.4 GHz for High Throughput: 80 Mbps (TCP), 100 Mbps (UDP).
- 2.4-GHz MRC Support for Extended Range.
- Wi-Fi Direct Concurrent Operation (Multichannel, Multirole).

When populated, WL1801MOD is interfaced with the AM57x through the following interfaces:

- AM57x MMC/SD/SDIO2 interface is used for WLAN data.

Please refer to the AM57x and the Texas Instruments [WL1801MOD](#) respective reference manuals for additional details.

**NOTE: CL-SOM-AM57x WiFi 802.11 b/g/n (without Bluetooth) functionality is available only with the ‘W’ ordering option.**

### 4.8.2 Dual Band WLAN & Bluetooth

CL-SOM-AM57x can be optionally shipped with the Texas Instruments WL1837MOD WLAN/Bluetooth module soldered onboard.

WL1837MOD is a WiLink™ 8 based Dual-Band industrial module enabling Wi-Fi®, Bluetooth®, and Bluetooth Low Energy (BLE) functionality with CL-SOM-AM57x. WL1837MOD supports the following features:

- FCC, IC, ETSI/CE, and TELEC modular certification.
- Support of IEEE Std 802.11a, 802.11b, 802.11g and 802.11n.
- 20- and 40-MHz SISO and 20-MHz 2 x 2 MIMO at 2.4 GHz for High Throughput: 80 Mbps (TCP), 100 Mbps (UDP).
- 2.4-GHz MRC Support for Extended Range and 5-GHz Diversity Capable.
- Wi-Fi Direct Concurrent Operation (Multichannel, Multirole).
- Bluetooth 4.1 Compliance and CSA2 Support.
- Dedicated Audio Processor Support of SBC Encoding + A2DP.
- Dual-Mode Bluetooth and BLE.

When populated, WL1837MOD is interfaced with the AM57x through the following interfaces:

- AM57x MMC/SD/SDIO2 interface is used for WLAN data.
- AM57x UART3 and McASP interfaces are employed for Bluetooth and A2DP data.

Please refer to the AM57x and the Texas Instruments [WL1837MOD](#) respective reference manuals for additional details.

**NOTE: CL-SOM-AM57x WiFi 802.11 a/b/g/n and Bluetooth functionality is available only with the ‘WAB’ ordering option.**

### 4.9 Analog Audio

The CL-SOM-AM57x analog audio functionality is implemented by interfacing the Wolfson WM8731L audio codec with the AM57x McASP3 port. The WM8731L codec supports the following main features:

- Highly Efficient Headphone driver
- Audio performance (‘A’ weighted): ADC SNR – 90dB, DAC SNR – 100dB.
- Microphone input and electret bias with side tone mixer
- ADC and DAC sampling frequency: 8kHz – 96kHz.
- Selectable ADC high pass filter

**NOTE: CL-SOM-AM57x Analog audio interface is available only with the ‘A’ ordering option.**

**Table 21 Analog Audio Characteristics**

Parameter	Test conditions	Min	Typ	Max	Unit
Stereo Headphone Output					
0-dB full-scale output voltage			1.0		V <sub>rms</sub>
Maximum output power, P <sub>O</sub>	R <sub>load</sub> = 32Ω		30		mW

Parameter	Test conditions	Min	Typ	Max	Unit
	$R_{load} = 16\Omega$		50		
Signal-to-noise ratio, A-weighted		90	97		dB
Total harmonic distortion	1kHz output, $R_{load} = 32\Omega$	$P_{out} = 10mW$ rms (-5dB)	0.056 -65	0.1 60	% dB
		$P_{out} = 20mW$ rms (-2dB)	0.56 -45	1.0 40	% dB
Power supply rejection ratio	1 kHz, $100 mV_{p-p}$		50		dB
	20Hz – 20kHz, $100mV_{p-p}$		45		
Programmable gain	1 kHz output	-73	0	6	dB
Programmable-gain step size	1 kHz		1		dB
Mute attenuation	1 kHz output, 0dB		80		dB
Line Input to ADC					
Input signal level (0 dB)			1.0		Vrms
Signal-to-noise ratio	A-weighted, 0dB gain, $F_{sample} = 48 kHz$ .	85	90		dB
	A-weighted, 0dB gain, $F_{sample} = 96 kHz$ .		90		
Dynamic range	A-weighted, -60-dB full-scale input	85	90		dB
Total harmonic distortion	-1-dB input, 0-dB gain		-84 0.006	-74 0.02	dB %
Power supply rejection ratio	1 kHz, $100 mV_{p-p}$		50		dB
	20Hz – 20kHz, $100mV_{p-p}$		45		
ADC Channel Separation	1 kHz input tone		90		dB
Programmable-gain	1 kHz input tone, $R_{source} < 50\Omega$	-34.5	0	+12	dB
Programmable-gain step size	Guaranteed Monotonic		1.5		dB
Mute attenuation	0dB, 1 kHz input tone		80		dB
Input resistance	12 dB input gain	10	15		k $\Omega$
	0 dB input gain	20	30		
Input capacitance			10		pF
Microphone Input to ADC					
Input signal level (0 dB)			1.0		Vrms
Signal-to-noise ratio	A-weighted, 0-dB gain		85		dB
Dynamic range,	A-weighted, -60-dB full-scale input		85		dB
Total harmonic distortion,	0dB input, 0dB gain		-60	-55	dB
Power supply rejection ratio	1 kHz, $100 mV_{p-p}$		50		dB
	20Hz – 20kHz, $100mV_{p-p}$		45		
Programmable-gain Boost	1kHz input, $R_{source} < 50\Omega$ , MICBOOST bit is 1.		34		dB
Mic Path gain (MICBOOST gain is additional to this nominal gain)	MICBOOST bit is 0, $R_{source} < 50\Omega$ ,		14		dB
Mute attenuation	0dB, 1 kHz input tone		80		dB
Input resistance			10		k $\Omega$
Input capacitance			10		pF
Microphone Bias					
Bias voltage		2.37 5	2.475	2.57 5	V
Bias-current source				3	mA
Output noise voltage	1kHz to 20kHz		25		nV/ $\sqrt{Hz}$

Please refer to the Wolfson Microelectronics WM8731L datasheet for additional details. The table below summarizes the analog audio interface signals

**Table 22 analog audio Interface Signals**

Signal Name	Pin #	Type	Description	Availability
LHPOUT	203	AO	Left Channel Headphone Output	With "A"
LLINEIN	199	AI	Left channel line input	With "A"
MICBIAS	191	AP	Electret microphone bias supply	With "A"
MICIN	193	AI	Microphone input	With "A"
RHPOUT	201	AO	Right Channel Headphone Output	With "A"
RLINEIN	197	AI	Right channel line input	With "A"

## 4.10 Digital Audio (McASP)

The multichannel digital audio interface available with CL-SOM-AM57x is based on the multichannel audio serial port module integrated into Sitara AM57x SoC. Up to four instances of the McASP block are available with CL-SOM-AM57x. McASP supports the following main features:

- S/PDIF, IEC60958-1, AES-3 formats
- Wide variety of I2S and similar bit-stream format
- S/PDIF, IEC60958-1, AES-3 formats - Transmit section only.
- TDM stream of 384 time slots specifically designed for easy interface to external digital interface receiver (DIR) device transmitting DIR frames to MCASP using the I2S protocol (one time slot for each DIR subframe) - Receive section.
- Programmable clock and frame sync polarity (rising or falling edge): ACLKR/X, AHCLKR/X, and AFSR/X.
- Slot length (number of bits per time slot): 8, 12, 16, 20, 24, 28, 32 bits supported.
- Word length (bits per word): 8, 12, 16, 20, 24, 28, 32 bits; always less than or equal to the time slot length.

For additional details on McASP, please refer to the Sitara AM57x technical reference manual.

The tables below summarize the McASP interface signals

**Table 23 McASP2 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
MCASP2_ACLKX	137*	IO	MCASP2 Transmit Bit Clock I/O	Always
MCASP2_AHCLKX	154*	O	MCASP2 Transmit High-Frequency Master Clock I/O	Always
MCASP2_AXR0	139	IO	MCASP2 Transmit/Receive Data I/O	Always
MCASP2_AXR1	143	IO	MCASP2 Transmit/Receive Data I/O	Always
MCASP2_FSX	145*	IO	MCASP2 Transmit Frame Sync I/O	Always

**Table 24 McASP3 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
MCASP3_ACLKR	199*	IO	MCASP3 Receive Bit Clock I/O	Without "A"
MCASP3_ACLKX	199*	IO	MCASP3 Transmit Bit Clock I/O	Without "A"
MCASP3_AHCLKX	193*	O	MCASP3 Transmit High-Frequency Master Clock I/O	Without "A"
MCASP3_AXR0	201*	IO	MCASP2 Transmit/Receive Data I/O	Without "A"
MCASP3_AXR1	197*	IO	MCASP2 Transmit/Receive Data I/O	Without "A"
MCASP3_FSR	203*	IO	MCASP3 Receive Frame Sync I/O	Without "A"
MCASP3_FSX	203*	IO	MCASP3 Transmit Frame Sync I/O	Without "A"

**Table 25 McASP4 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
MCASP4_ACLKR	13*	IO	MCASP4 Receive Bit Clock I/O	Always
MCASP4_ACLKX	13*	IO	MCASP4 Transmit Bit Clock I/O	Always
MCASP4_AHCLKX	97*	O	MCASP4 Transmit High-Frequency Master Clock I/O	Without "E2"
MCASP4_AXR0	15*	IO	MCASP4 Transmit/Receive Data I/O	Always
MCASP4_AXR1	17*	IO	MCASP4 Transmit/Receive Data I/O	Always
MCASP4_FSR	11*	IO	MCASP4 Receive Frame Sync I/O	Always
MCASP4_FSX	11*	IO	MCASP4 Transmit Frame Sync I/O	Always

**Table 26 McASP5 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
MCASP5_ACLKR	5*	IO	MCASP5 Receive Bit Clock I/O	Always
MCASP5_ACLKX	5*	IO	MCASP5 Transmit Bit Clock I/O	Always
MCASP5_AHCLKX	152*	O	MCASP5 Transmit High-Frequency Master Clock I/O	Always
MCASP5_AXR0	7*	IO	MCASP5 Transmit/Receive Data I/O	Always
MCASP5_AXR1	9*	IO	MCASP5 Transmit/Receive Data I/O	Always
MCASP5_FSR	3*	IO	MCASP5 Receive Frame Sync I/O	Always
MCASP5_FSX	3*	IO	MCASP5 Transmit Frame Sync I/O	Always

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

## 4.11 MMC / SD /SDIO

Up to three full featured eMMC/SD/SDIO ports are available with CL-SOM-AM57x. The ports are implemented with three instances of the eMMC/SD/SDIO host controller integrated into the Sitara AM57x SoC. The eMMC/SD/SDIOi controller is also referred to as MMCi. The following general features are supported:

- Full compliance with MMC/eMMC command/response sets as defined in the JC64 MMC/eMMC standard specification, v4.5
- Full compliance with SD command/response sets as defined in the SD Physical Layer specification v3.01
- Full compliance with SDIO command/response sets and interrupt/read-wait suspend-resume operations as defined in the SD part E1 specification v3.00
- Full compliance with SD Host Controller Standard Specification sets as defined in the SD card specification Part A2 v3.00
- Built-in 1024-byte buffer for read or write
- Supported SD v3.0 data transfer rates:
  - DS mode (3.3V IOs): up to 12 MBps (24 MHz clock)
  - HS mode (3.3V IOs): up to 24 MBps (48 MHz clock)

Each controller has the following features:

- MMC1 - 4-bit wide data bus, supports 1- and 4-bit data transfers (mainly used for connection with SD cards).
- MMC3 - 8-bit wide data bus, supports 1-, 4-, and 8-bit data transfers (mainly used for connection with SDIO cards).
- MMC4 - 4-bit wide data bus, supports 1- and 4-bit data transfers (mainly used for connection with SDIO cards).

**NOTE: CL-SOM-AM57x MMC/SD/SDIO port 4 is available only without the 'W' and 'WAB' ordering options.**

Please refer to the AM57x Reference manual for additional details. The tables below summarize the MMC/SD/SDIO interface signals

**Table 27 MMC/SD/SDIO 1 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
MMC1_CLK	80*	IO	MMC1 clock	Always
MMC1_CMD	82*	IO	MMC1 command	Always
MMC1_DAT0	84*	IO	MMC1 data bit 0	Always
MMC1_DAT1	86*	IO	MMC1 data bit 1	Always

Signal Name	Pin #	Type	Description	Availability
MMC1_DAT2	88*	IO	MMC1 data bit 2	Always
MMC1_DAT3	90*	IO	MMC1 data bit 3	Always
MMC1_SDCD	61*	I	MMC1 Card Detect	Always
MMC1_SDWP	67*	I	MMC1 Write Protect	Always

**Table 28 MMC/SD/SDIO 3 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
MMC3_CLK	75*	IO	MMC3 clock	Always
MMC3_CMD	69*	IO	MMC3 command	Always
MMC3_DAT0	63*	IO	MMC3 data bit 0	Always
MMC3_DAT1	65*	IO	MMC3 data bit 1	Always
MMC3_DAT2	58*	IO	MMC3 data bit 2	Always
MMC3_DAT3	52*	IO	MMC3 data bit 3	Always
MMC3_DAT4	202*	IO	MMC3 data bit 4	Always
MMC3_DAT5	163*	IO	MMC3 data bit 5	Always
MMC3_DAT6	194*	IO	MMC3 data bit 6	Always
MMC3_DAT7	179*	IO	MMC3 data bit 7	Always
MMC3_SDCD	40*	I	MMC3 Card Detect	Always
MMC3_SDWP	34*	I	MMC3 Write Protect	Always

**Table 29 MMC/SD/SDIO 4 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
MMC4_CLK	157*	IO	MMC4 clock	Without "W"/ "WAB"
MMC4_CMD	147*	IO	MMC4 command	Without "W"/ "WAB"
MMC4_DAT0	155*	IO	MMC4 data bit 0	Without "W"/ "WAB"
MMC4_DAT1	153*	IO	MMC4 data bit 1	Without "W"/ "WAB"
MMC4_DAT2	151*	IO	MMC4 data bit 2	Without "W"/ "WAB"
MMC4_DAT3	149*	IO	MMC4 data bit 3	Without "W"/ "WAB"
MMC4_SDCD	60*	I	MMC4 Card Detect	Always
MMC4_SDWP	62*	I	MMC4 Card Detect	Always

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

## 4.12 UART

CL-SOM-AM57x provides up to 9 UART ports. The functionality is derived from the UART modules integrated into the Sitara AM57x SoC. One UART port supports IrDA features. The following general features are supported:

- 16C750 compatibility
- Baud rate from 300 bps up to 12 Mbps
- Flow control: Hardware (RTS/CTS) or software (XON/XOFF)
- UART1 module has extended modem control signals (DCD, RI, DTR, DSR)
- Support of IrDA 1.4 slow infrared (SIR), medium infrared (MIR), and fast infrared (FIR) communications (UART3 only).
- Support of consumer infrared (CIR) for remote control applications (UART3 only)

For additional details on UART, please refer to the Sitara AM57x technical reference manual. The tables below summarize the UART interface signals

**Table 30 UART1 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
UART1_CTSN	157*	I	UART1 clear to send active low	Without "W"/ "WAB"
UART1_DCDN	155*	I	UART1 Data Carrier Detect active low	Without "W"/ "WAB"
UART1_DSRN	153*	I	UART1 Data Set Ready Active Low	Without "W"/ "WAB"
UART1_DTRN	151*	O	UART1 Data Terminal Ready Active Low	Without "W"/ "WAB"

Signal Name	Pin #	Type	Description	Availability
UART1_RIN	149*	I	UART1 Ring Indicator Input	Without "W"/ "WAB"
UART1_RTSN	147*	O	UART1 request to send active low	Without "W"/ "WAB"
UART1_RXD	60*	I	UART1 Receive Data Input	Always
UART1_TXD	62*	O	UART1 Transmit Data Output	Always

**Table 31 UART2 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
UART2_CTSN	151*	I	UART2 clear to send active low	Without "W"/ "WAB"
UART2_RTSN	149*	O	UART2 request to send active low	Without "W"/ "WAB"
UART2_RXD	155*	I	UART2 Receive Data Input	Without "W"/ "WAB"
UART2_TXD	153*	O	UART2 Transmit Data Output	Without "W"/ "WAB"

**Table 32 UART3 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
UART3_CTSN	155*	I	UART3 clear to send active low	Without "W"/ "WAB"
UART3_IRTX	149*	O	Infrared data output	Without "W"/ "WAB"
UART3_RCTX	155*	O	Remote control data output	Without "W"/ "WAB"
UART3_RTSN	153*	O	UART3 request to send active low	Without "W"/ "WAB"
UART3_RXD	117*	I	UART3 Receive Data Input for both normal UART mode and IrDA mode.	Always
UART3_RXD	7*	I	UART3 Receive Data Input for both normal UART mode and IrDA mode.	Always
UART3_RXD	151*	I	UART3 Receive Data Input for both normal UART mode and IrDA mode.	Without "W"/ "WAB"
UART3_SD	153*	O	Infrared transceiver configure/shutdown	Without "W"/ "WAB"
UART3_TXD	111*	O	UART3 Transmit Data Output	Always

## 4.13 SPI

Up-to three SPI interfaces are accessible through the CL-SOM-AM57x carrier board interface. The SPI interfaces are derived from AM57x integrated multichannel serial port interface (McSPI). Each instance of McSPI port can operate as either a master or as an SPI slave. The following features are supported:

- Serial clock with programmable frequency, polarity, and phase for each channel.
- Wide selection of SPI word lengths, ranging from 4 to 32 bits.
- Up to four master channels, or single channel in slave mode.
- Master multichannel mode: Full duplex/half duplex.

For additional details on McSPI, please refer to the Sitara AM57x technical reference manual. The tables below summarize the SPI interface signals

**Table 40 SPI1 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
SPI1_CS0	72*	I/O	SPI1 Chip Select I/O	Without "I"
SPI1_CS1	181*	I/O	SPI1 Chip Select I/O	Always
SPI1_CS2	40*	I/O	SPI1 Chip Select I/O	Always
SPI1_CS3	34*	I/O	SPI1 Chip Select I/O	Always
SPI1_D0	66*	I/O	SPI1 Data I/O. Can be configured as either MISO or MOSI.	Without "I"
SPI1_D1	68*	I/O	SPI1 Data I/O. Can be configured as either MISO or MOSI.	Without "I"
SPI1_SCLK	70*	I/O	SPI1 Clock I/O	Without "I"

**Table 41 SPI3 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
SPI3_CS0	98*	I/O	SPI3 Chip Select I/O	Always
SPI3_CS0	58*	I/O	SPI3 Chip Select I/O	Always
SPI3_CS0	17*	I/O	SPI3 Chip Select I/O	Always
SPI3_CS1	161*	I/O	SPI3 Chip Select I/O	Always
SPI3_CS1	52*	I/O	SPI3 Chip Select I/O	Always
SPI3_CS2	106*	I/O	SPI3 Chip Select I/O	Always
SPI3_CS3	76*	I/O	SPI3 Chip Select I/O	Always
SPI3_D0	100*	I/O	SPI3 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI3_D0	65*	I/O	SPI3 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI3_D0	15*	I/O	SPI3 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI3_D1	111*	I/O	SPI3 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI3_D1	104*	I/O	SPI3 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI3_D1	63*	I/O	SPI3 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI3_D1	11*	I/O	SPI3 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI3_SCLK	117*	I/O	SPI3 Clock I/O	Always
SPI3_SCLK	102*	I/O	SPI3 Clock I/O	Always
SPI3_SCLK	69*	I/O	SPI3 Clock I/O	Always
SPI3_SCLK	13*	I/O	SPI3 Clock I/O	Always

**Table 42 SPI4 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
SPI4_CS0	9*	I/O	SPI4 Chip Select I/O	Always
SPI4_CS0	179*	I/O	SPI4 Chip Select I/O	Always
SPI4_CS1	95*	I/O	SPI4 Chip Select I/O	Always
SPI4_CS2	111*	I/O	SPI4 Chip Select I/O	Always
SPI4_CS3	81*	I/O	SPI4 Chip Select I/O	Always
SPI4_D0	7*	I/O	SPI4 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI4_D0	194*	I/O	SPI4 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI4_D1	73*	I/O	SPI4 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI4_D1	3*	I/O	SPI4 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI4_D1	163*	I/O	SPI4 Data I/O. Can be configured as either MISO or MOSI.	Always
SPI4_SCLK	5*	I/O	SPI4 Clock I/O	Always
SPI4_SCLK	202*	I/O	SPI4 Clock I/O	Always

## 4.14 I2C

CL-SOM-AM57x is equipped with three I2C bus interfaces: I2C2, I2C3, and I2C5. The I2C interfaces are derived from Sitara AM57x I2C controllers. I2C2 controller support Fast mode (up to 400Kbps). I2C3 and I2C5 controller support HS mode (up to 3.4Mbps). The following general features are supported by all I2C bus interfaces:

- Compliant with Philips I2C specification version 2.1
- Supports a standard mode (up to 100 kbps) and fast mode (up to 400 kbps)
- Supports HS mode for transfer up to 3.4 Mbps (only for I2C3 and I2C5)
- 7-bit and 10-bit device addressing modes
- Multimaster transmitter/receiver modes (master or slave)

---

**NOTE: I2C1 and I2C4 are used on CL-SOM-AM57x and not accessible on the interface connector.**

---

For additional details on I2C, please refer to the Sitara AM57x technical reference manual. The tables below summarize the I2C interface signals

**Table 43 I2C2 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
I2C2_SCL	25*	IOD	I2C2 Clock I/O	Always
I2C2_SDA	31*	IOD	I2C2 Data I/O	Always

**Table 44 I2C3 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
I2C3_SCL	43*	IOD	I2C2 Clock I/O	Always
I2C3_SCL	113*	IOD	I2C2 Clock I/O	Always
I2C3_SDA	49*	IOD	I2C2 Data I/O	Always
I2C3_SDA	115*	IOD	I2C2 Data I/O	Always

**Table 45 I2C5 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
I2C5_SCL	129*	IOD	I2C2 Clock I/O	Always
I2C5_SCL	3*	IOD	I2C2 Clock I/O	Always
I2C5_SCL	77*	IOD	I2C2 Clock I/O	Without "E2"
I2C5_SDA	135*	IOD	I2C2 Data I/O	Always
I2C5_SDA	5*	IOD	I2C2 Data I/O	Always
I2C5_SDA	79*	IOD	I2C2 Data I/O	Without "E2"

---

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

---

## 4.15 CAN Bus

CL-SOM-AM57x is equipped with two instances of the CAN bus controller. Each interface is implemented with the AM57x integrated DCAN module. The following features are supported by the DCAN module:

- Supports CAN protocol version 2.0 part A, B
- Bit rates up to 1 MBit/s

- 64 message objects in a dedicated message RAM
- Support for DMA access

For additional details on DCAN, please refer to the Sitara AM57x technical reference manual. The tables below summarize the CAN interface signals

**Table 46 CAN1 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
DCAN1_RX	56*	I/O	DCAN1 receive data pin	Always
DCAN1_TX	54*	I/O	DCAN1 transmit data pin	Always

**Table 47 CAN2 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
DCAN2_RX	113*	I/O	DCAN2 receive data pin	Always
DCAN2_RX	34*	I/O	DCAN2 receive data pin	Always
DCAN2_TX	115*	I/O	DCAN2 transmit data pin	Always
DCAN2_TX	40*	I/O	DCAN2 transmit data pin	Always

---

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

---

## 4.16 Resistive Touch Interface

CL-SOM-AM57x features an optional on-board Texas Instruments TSC2046 resistive touch-screen controller. The controller is communicating with the AM57x SoC over the QSPI interface. The interface supports 4-wire touch panels and is available through the CL-SOM-AM57x carrier board interface.

---

**NOTE: CL-SOM-AM57x Resistive touch interface is available only with the 'I' ordering option.**

---

Please refer to Texas Instruments TSC2046 datasheet for additional details. The table below summarizes the resistive touch interface signals

**Table 48 resistive touch Interface Signals**

Signal Name	Pin #	Type	Description	Availability
TS_XN	68	AIO	Touch screen X- (left)	With "I"
TS_XP	66	AIO	Touch screen X+ (right)	With "I"
TS_YN	72	AIO	Touch screen Y- (bottom)	With "I"
TS_YP	70	AIO	Touch screen Y+ (top)	With "I"

## 4.17 HDQ / 1-Wire

CL-SOM-AM57x features a single instance of the HDQ/1-Wire interface. The interface is derived from the HDQ1W module integrated into the Sitara AM57x SoC. HDQ1W supports the following features:

- Software selectable HDQ or 1-Wire mode
- Benchmarq HDQ protocol
- Dallas Semiconductor 1-Wire protocol
- Power-down mode

For additional details on HDQ1W, please refer to the Sitara AM57x technical reference manual. The table below summarizes the HDQ/1-wire interface signals

**Table 49 HDQ/1-wire Interface Signals**

Signal Name	Pin #	Type	Description	Availability
HDQ0	152*	IOD	HDQ or 1-wire protocol single interface pin	Always
HDQ0	97*	IOD	HDQ or 1-wire protocol single interface pin	Without "E2"

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

## 4.18 Enhanced High Resolution PWM module (eHRPWM)

Three enhanced high resolution pulse width modulator (eHRPWM) module instances are accessible through the CL-SOM-AM57x carrier board interface. All eHRPWM modules are derived from the Sitara AM57x on-SoC. Each eHRPWM module supports the following features:

- Dedicated 16 bit time-base with Period / Frequency control
- Two PWM outputs (EHRPWMA and EHRPWMB) that can be used in the following configurations:
  - Two independent PWM outputs with single-edge operation
  - Two independent PWM outputs with dual-edge symmetric operation
  - One independent PWM output with dual-edge asymmetric operation
- Supports Dead-band generation with independent Rising and Falling edge delay control
- Provides asynchronous over-ride control of PWM signals during fault conditions
- Supports “trip zone” allocation of both latched and un-latched fault conditions
- Allows events to trigger both CPU interrupts and start of ADC conversions
- Support PWM chopping by high frequency carrier signal, used for pulse transformer gate drives.

For additional details on eHRPWM, please refer to the Sitara AM57x technical reference manual. The table below summarizes the eHRPWM interface signals

**Table 50 eHRPWM Interface Signals**

Signal Name	Pin #	Type	Description	Availability
EHRPWM1A	73*	O	EHRPWM1 Output A	Always
EHRPWM2_TRIPZONE_INPUT	75*	IO	EHRPWM2 Trip Zone Input	Always
EHRPWM2A	49*	O	EHRPWM2 Output A	Always
EHRPWM2B	43*	O	EHRPWM2 Output B	Always
EHRPWM3_TRIPZONE_INPUT	194*	IO	EHRPWM3 Trip Zone Input	Always
EHRPWM3A	202*	O	EHRPWM3 Output A	Always
EHRPWM3B	163*	O	EHRPWM3 Output B	Always

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

## 4.19 Enhanced Capture module (eCAP)

Two enhanced capture (eCAP) module instances are accessible through the CL-SOM-AM57x carrier board interface. All eCAP modules are derived from the Sitara AM57x on-SoC. eCAP can be used for the following applications:

- Sample rate measurements of audio inputs
- Speed measurements of rotating machinery (for example, toothed sprockets sensed via Hall sensors)

The following features are supported with eCAP:

- 32-bit time base counter
- 4-event time-stamp registers (each 32 bits)
- Edge polarity selection for up to four sequenced time-stamp capture events
- Interrupt on either of the four events
- Single shot capture of up to four event time-stamps
- Continuous mode capture of time-stamps in a four-deep circular buffer
- When not used in capture mode, the ECAP module can be configured as a single channel PWM output

For additional details on eCAP, please refer to the Sitara AM57x technical reference manual. The table below summarizes the eCAP interface signals

**Table 51 eCAP Interface Signals**

Signal Name	Pin #	Type	Description	Availability
ECAP2_IN_PWM2_OUT	69*	IO	ECAP2 Capture Input / PWM Output	Always
ECAP3_IN_PWM3_OUT	179*	IO	ECAP3 Capture Input / PWM Output	Always

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

## 4.20 Quadrature Encoder Pulse module (eQEP)

One enhanced quadrature encoder pulse (eQEP3) module instance is accessible through the CL-SOM-AM57x carrier board interface. eQEP3 module is derived from the Sitara AM57x on-SoC. The eQEP3 module allows effective sensing of wheel rotation parameters such as direction and speed without software intervention. The eQEP3 inputs include two pins for quadrature-clock mode or direction-count mode, an index (or 0 marker), and a strobe input.

For additional details on eQEP3, please refer to the Sitara AM57x technical reference manual. The table below summarizes the eQEP3 interface signals

**Table 52 eQEP3 Interface Signals**

Signal Name	Pin #	Type	Description	Availability
EQEP3_INDEX	58*	IO	EQEP3 Index Input	Always
EQEP3_STROBE	52*	IO	EQEP3 Strobe Input	Always

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

## 4.21 PRU-ICSS

### 4.21.1 PRU-ICSS MII

The PRU-ICSS MII interface is derived from Sitara AM57x on-SoC MII\_RT module, featuring two MII ports and configurable connections to PRUs. For additional details on PRU-ICSS MII interface, please refer to the Sitara AM57x technical reference manual. The table below summarizes the PRU-ICSS MII interface signals

**Table 53 PRU-ICSS MII Interface Signals**

Signal Name	Pin #	Type	Description	Availability
PR2_MDIO_DATA	9*	IO	MDIO Data	Always
PR2_MDIO_DATA	9*	IO	MDIO Data	Always
PR2_MDIO_MDCLK	7*	O	MDIO Clock	Always
PR2_MDIO_MDCLK	7*	O	MDIO Clock	Always

Signal Name	Pin #	Type	Description	Availability
PR2_MII_MR1_CLK	58*	I	MI11 Receive Clock	Always
PR2_MII_MT1_CLK	49*	I	MI11 Transmit Clock	Always
PR2_MI11_COL	152*	I	MI11 Collision Detect	Always
PR2_MI11_CRS	154*	I	MI11 Carrier Sense	Always
PR2_MI11_RXD0	179*	I	MI11 Receive Data	Always
PR2_MI11_RXD1	194*	I	MI11 Receive Data	Always
PR2_MI11_RXD2	163*	I	MI11 Receive Data	Always
PR2_MI11_RXD3	202*	I	MI11 Receive Data	Always
PR2_MI11_RXDV	52*	I	MI11 Data Valid	Always
PR2_MI11_RXER	201*	I	MI11 Receive Error	Without "A"
PR2_MI11_RXLINK	197*	I	MI11 Receive Link	Without "A"
PR2_MI11_TXD0	65*	O	MI11 Transmit Data	Always
PR2_MI11_TXD1	63*	O	MI11 Transmit Data	Always
PR2_MI11_TXD2	69*	O	MI11 Transmit Data	Always
PR2_MI11_TXD3	75*	O	MI11 Transmit Data	Always
PR2_MI11_TXEN	43*	O	MI11 Transmit Enable	Always

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

## 4.21.2 PRU-ICSS UART

The UART peripheral within the PRU-ICSS is based on the industry standard TL16C550 asynchronous communications element, which is a functional upgrade of the TL16C450. CL-SOM-AM57x carrier board interface features two instances of the PRU UART interface. For additional details on PRU-ICSS UART, please refer to the Sitara AM57x technical reference manual. The table below summarizes the PRUSS\_UART interface signals

**Table 54 PRUSS\_UART Interface Signals**

Signal Name	Pin #	Type	Description	Availability
PR1_UART0_CTS_N	106*	I	UART Clear-To-Send	Always
PR1_UART0_RTS_N	108*	O	UART Ready-To-Send	Always
PR1_UART0_RXD	110*	I	UART Receive Data	Always
PR1_UART0_TXD	112*	O	UART Transmit Data	Always
PR2_UART0_CTS_N	130*	I	UART Clear-To-Send	Always
PR2_UART0_RTS_N	134*	O	UART Ready-To-Send	Always
PR2_UART0_RXD	136*	I	UART Receive Data	Always
PR2_UART0_TXD	138*	O	UART Transmit Data	Always

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

## 4.21.3 PRU-ICSS Industrial Ethernet Peripheral

CL-SOM-AM57x carrier board interface features one instance of the PRU-ICSS integrated “industrial Ethernet peripheral” (IEP) interface. The IEP performs hardware work required for industrial Ethernet functions. The IEP module features an industrial Ethernet timer with 16 compare events and a digital I/O port (DIGIO). The industrial Ethernet peripheral supports the following features:

- One master 32-bit count-up counter with an overflow status bit
- Eight 32-bit compare registers
- 8 channel digital data input and 8 channel digital data output
- Digital data out enable (optional tri-state control)
- Supports direct sampling of data in signals
- Data input sampling upon external latch event through a dedicated latch input signal

For additional details on PRU-ICSS IEP, please refer to the Sitara AM57x technical reference manual. The table below summarizes the PRU-ICSS industrial Ethernet interface signals

**Table 55 PRU-ICSS industrial Ethernet Interface Signals**

Signal Name	Pin #	Type	Description	Availability
PR2_EDC_LATCH0_IN	118*	I	ECAT Distributed Clock Latch In	Always
PR2_EDC_LATCH1_IN	120*	I	ECAT Distributed Clock Latch In	Always
PR2_EDC_SYNC0_OUT	122*	O	ECAT Distributed Clock Sync Out	Always
PR2_EDC_SYNC1_OUT	124*	O	ECAT Distributed Clock Sync Out	Always
PR2_EDIO_DATA_IN0	94*	I	ECAT Digital I/Os Data In	Always
PR2_EDIO_DATA_IN1	92*	I	ECAT Digital I/Os Data In	Always
PR2_EDIO_DATA_IN2	142*	I	ECAT Digital I/Os Data In	Always
PR2_EDIO_DATA_IN3	144*	I	ECAT Digital I/Os Data In	Always
PR2_EDIO_DATA_IN4	146*	I	ECAT Digital I/Os Data In	Always
PR2_EDIO_DATA_IN5	148*	I	ECAT Digital I/Os Data In	Always
PR2_EDIO_DATA_IN6	74*	I	ECAT Digital I/Os Data In	Always
PR2_EDIO_DATA_IN7	76*	I	ECAT Digital I/Os Data In	Always
PR2_EDIO_DATA_OUT0	94*	O	ECAT Digital I/Os Data Out	Always
PR2_EDIO_DATA_OUT1	92*	O	ECAT Digital I/Os Data Out	Always
PR2_EDIO_DATA_OUT2	142*	O	ECAT Digital I/Os Data Out	Always
PR2_EDIO_DATA_OUT3	144*	O	ECAT Digital I/Os Data Out	Always
PR2_EDIO_DATA_OUT4	146*	O	ECAT Digital I/Os Data Out	Always
PR2_EDIO_DATA_OUT5	148*	O	ECAT Digital I/Os Data Out	Always
PR2_EDIO_DATA_OUT6	74*	O	ECAT Digital I/Os Data Out	Always
PR2_EDIO_DATA_OUT7	76*	O	ECAT Digital I/Os Data Out	Always
PR2_EDIO_LATCH_IN	126*	I	ECAT Digital I/O Latch In	Always
PR2_EDIO_SOF	128*	O	ECAT Digital I/O Start of Frame	Always

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

#### 4.21.4 PRU-ICSS Enhanced Capture Event Module (PRU-ICSS eCAP)

A PRU-ICSS eCAP module is available with CL-SOM-AM57x. The PRU eCAP module within the PRU-ICSS is identical to the eCAP module described in chapter 4.19 above. For additional details on PRU-ICSS eCAP, please refer to the Sitara AM57x technical reference manual. The table below summarizes the PRU-ICSS eCAP interface signals

**Table 56 PRU-ICSS eCAP Interface Signals**

Signal Name	Pin #	Type	Description	Availability
PR1_ECAP0_ECAP_CAPIN_APWM_O	116*	IO	Capture Input / PWM output	Always
PR2_ECAP0_ECAP_CAPIN_APWM_O	140*	IO	Capture Input / PWM output	Always

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

#### 4.21.5 PRU-ICSS GPI / GPO

CL-SOM-AM57x features PRU-ICSS dedicated general purpose input / output signals. This functionality is derived from the PRU-ICSS Enhanced GPIO submodule integrated within the Sitara AM57x. For additional details on PRU-ICSS GPI/GPO signals, please refer to the Sitara AM57x technical reference manual. The table below summarizes the PRU-ICSS GPI/GPO interface signals

**Table 57 PRU-ICSS GPI/GPO Interface Signals**

Signal Name	Pin #	Type	Description	Availability
PR2_PRU0_GPIO	112*	I	PRU0 General-Purpose Input	Always
PR2_PRU0_GPIO	49*	I	PRU0 General-Purpose Input	Always

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

## 4.22 General Purpose Timer

CL-SOM-AM57x features 9 instances of the AM57x integrated general-purpose timers (GPT). The following main features are supported:

- Free-running 32-bit upward counter
- Compare and capture modes
- Auto reload mode
- Programmable divider clock source ( $2n$ , where  $n = [0:8]$ )
- Dedicated input trigger for capture mode and dedicated output trigger/PWM signal

Please refer to the AM57x Reference manual for additional details. The table below summarizes the GPT interface signals

**Table 58 GPT Interface Signals**

Signal Name	Pin #	Type	Description	Availability
TIMER1	115*	IO	PWM output/event trigger input	Always
TIMER13	152*	IO	PWM output/event trigger input	Always
TIMER14	154*	IO	PWM output/event trigger input	Always
TIMER15	193*	IO	PWM output/event trigger input	Without "A"
TIMER15	156	IO	PWM output/event trigger input	Without "D4"
TIMER16	200*	IO	PWM output/event trigger input	Always
TIMER16	97*	IO	PWM output/event trigger input	Without "E2"

Signal Name	Pin #	Type	Description	Availability
TIMER2	113*	IO	PWM output/event trigger input	Always
TIMER3	99*	IO	PWM output/event trigger input	Always
TIMER6	81*	IO	PWM output/event trigger input	Always
TIMER8	95*	IO	PWM output/event trigger input	Always

---

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

---

## 4.23 GPIO

Up-to 95 of the AM57x general purpose input/output (GPIO) signals are available through the carrier board interface of CL-SOM-AM57x. When configured as an output, it is possible to write to an AM57x register to control the state driven on the output pin. When configured as an input, it is possible to detect the state of the input by reading the state of an AM57x register. The GPIO signals can be configured for the following applications:

- Data input (capture)/output (drive)
- Keyboard interface with a debounce cell
- Interrupt generation in active mode upon the detection of external events. Detected events are processed by two parallel independent interrupt-generation sub-modules to support bi-processor operations.
- Wake-up request generation in idle mode upon the detection of external events (GPIO1\_\* only)

---

**NOTE: Not all GPIO signals supported by the AM57x SoC are available through the CL-SOM-AM57x carrier board interface.**

---

Please refer to the AM57x Reference manual for additional details. The table below summarizes the GPIO interface signals

**Table 59 GPIO Interface Signals**

Signal Name	Pin #	Type	Description	Availability
GPIO1_1	192	I	General-Purpose Input. 10K PD onboard CL-SOM-AM57x.	With "C1500D"
GPIO1_14	54*	IO	General-Purpose Input/Output (I/O)	Always
GPIO1_15	56*	IO	General-Purpose Input/Output (I/O)	Always
GPIO1_16	151*	IO	General-Purpose Input/Output (I/O)	Without "W"/ "WAB"
GPIO1_17	149*	IO	General-Purpose Input/Output (I/O)	Without "W"/ "WAB"
GPIO1_22	202*	IO	General-Purpose Input/Output (I/O)	Always
GPIO1_23	163*	IO	General-Purpose Input/Output (I/O)	Always
GPIO1_24	194*	IO	General-Purpose Input/Output (I/O)	Always
GPIO1_25	179*	IO	General-Purpose Input/Output (I/O)	Always
GPIO1_26	77*	IO	General-Purpose Input/Output (I/O)	Without "E2"
GPIO1_27	79*	IO	General-Purpose Input/Output (I/O)	Without "E2"
GPIO1_28	83*	IO	General-Purpose Input/Output (I/O)	Without "E2"
GPIO1_29	85*	IO	General-Purpose Input/Output (I/O)	Without "E2"
GPIO2_2	95*	IO	General-Purpose Input/Output (I/O)	Always
GPIO2_4	81*	IO	General-Purpose Input/Output (I/O)	Always
GPIO3_29	93	IO	General-Purpose Input/Output (I/O)	Always
GPIO4_0	73*	IO	General-Purpose Input/Output (I/O)	Always

GPIO4_21	161*	IO	General-Purpose Input/Output (I/O)	Always
GPIO4_22	100*	IO	General-Purpose Input/Output (I/O)	Always
GPIO4_23	102*	IO	General-Purpose Input/Output (I/O)	Always
GPIO5_13	199*	IO	General-Purpose Input/Output (I/O)	Without "A"

Signal Name	Pin #	Type	Description	Availability
GPIO5_14	203*	IO	General-Purpose Input/Output (I/O)	Without "A"
GPIO5_18	117*	IO	General-Purpose Input/Output (I/O)	Always
GPIO5_19	111*	IO	General-Purpose Input/Output (I/O)	Always
GPIO5_2	135*	IO	General-Purpose Input/Output (I/O)	Always
GPIO5_3	129*	IO	General-Purpose Input/Output (I/O)	Always
GPIO5_4	162	IO	General-Purpose Input/Output (I/O)	Without "U4"
GPIO6_10	49*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_11	43*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_12	200*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_13	156	IO	General-Purpose Input/Output (I/O)	Without "U4"
GPIO6_14	115*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_15	113*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_16	99*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_17	152*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_18	154*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_19	193*	IO	General-Purpose Input/Output (I/O)	Without "A"
GPIO6_20	97*	IO	General-Purpose Input/Output (I/O)	Without "E2"
GPIO6_21	80*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_22	82*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_23	84*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_24	86*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_25	88*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_26	90*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_27	61*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_28	67*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_29	75*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_30	69*	IO	General-Purpose Input/Output (I/O)	Always
GPIO6_31	63*	IO	General-Purpose Input/Output (I/O)	Always
GPIO7_0	65*	IO	General-Purpose Input/Output (I/O)	Always
GPIO7_1	58*	IO	General-Purpose Input/Output (I/O)	Always
GPIO7_10	72*	IO	General-Purpose Input/Output (I/O)	Without "I"
GPIO7_11	181*	IO	General-Purpose Input/Output (I/O)	Always
GPIO7_12	40*	IO	General-Purpose Input/Output (I/O)	Always
GPIO7_13	34*	IO	General-Purpose Input/Output (I/O)	Always
GPIO7_2	52*	IO	General-Purpose Input/Output (I/O)	Always
GPIO7_22	60*	IO	General-Purpose Input/Output (I/O)	Always
GPIO7_23	62*	IO	General-Purpose Input/Output (I/O)	Always
GPIO7_24	157*	IO	General-Purpose Input/Output (I/O)	Without "W"/ "WAB"
GPIO7_25	147*	IO	General-Purpose Input/Output (I/O)	Without "W"/ "WAB"
GPIO7_26	155*	IO	General-Purpose Input/Output (I/O)	Without "W"/ "WAB"
GPIO7_27	153*	IO	General-Purpose Input/Output (I/O)	Without "W"/ "WAB"
GPIO7_3	101*	IO	General-Purpose Input/Output (I/O)	Without "E2"
GPIO7_4	103*	IO	General-Purpose Input/Output (I/O)	Without "E2"
GPIO7_5	89*	IO	General-Purpose Input/Output (I/O)	Without "E2"
GPIO7_6	91*	IO	General-Purpose Input/Output (I/O)	Without "E2"
GPIO7_7	70*	IO	General-Purpose Input/Output (I/O)	Without "I"
GPIO7_8	68*	IO	General-Purpose Input/Output (I/O)	Without "I"
GPIO7_9	66*	IO	General-Purpose Input/Output (I/O)	Without "I"
GPIO8_0	106*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_1	108*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_10	128*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_11	130*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_12	134*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_13	136*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_14	138*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_15	140*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_16	94*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_17	92*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_18	142*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_19	144*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_20	110*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_22	146*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_21	148*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_22	74*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_23	76*	IO	General-Purpose Input/Output (I/O)	Always

Signal Name	Pin #	Type	Description	Availability
GPIO8_3	112*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_4	116*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_5	118*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_6	120*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_7	122*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_8	124*	IO	General-Purpose Input/Output (I/O)	Always
GPIO8_9	126*	IO	General-Purpose Input/Output (I/O)	Always

---

**NOTE: Pins denoted with "\*" are multifunctional. For additional details please refer to chapter 5.5 of this document**

---

## 5 SYSTEM LOGIC

CL-SOM-AM57x allows access to several system logic related signals through the carrier board interface. Please refer to chapter 4 of this document for signal description notes and legend.

### 5.1 Power Supply

The CL-SOM-AM57x recommended supply voltage is 4.2V to 5V.

**Table 60 Power signals**

Signal Name	Type	Description
VSYS	PWR	Main power supply (5V Typ).
BACKUP_BAT	PWR	RTC back-up battery power input. Connect to a 3V coin-cell lithium battery through a 10Ω resistor. Should be grounded if RTC functionality is not required.
GND	PWR	Common ground.
AUDIO_GND	PWR	Audio GND

### 5.2 System and Miscellaneous Signals

#### 5.2.1 Power Management

All power-management capabilities of the CL-SOM-AM57x are derived from the combination of Sitara AM57x SoC with the TPS659037 PMIC. For additional details on power management capabilities, please refer to the Sitara AM57x & TPS659037 technical reference manuals. The following table summarizes carrier board accessible power-management signals

**Table 61 Power Control signals**

Signal Name	Pin #	Type	Description	Availability
PWRON	165	PUSUPPLY	External power-on event input. Fixed PU to VSYS (120KOhm TYP). A falling edge on this signal generates ON request, which transitions the CL-SOM-AM57x from the OFF to the ACTIVE state. If PWRON button is pressed (low) while the device is on, a power-on interrupt is triggered. Keeping this pin signal constantly low more than the long-press delay, results in system switch off. The duration of long-press delay can be set by software to either 6, 8, 10, or 12 seconds.	Always
ENABLE1	198	SPD	Peripheral power request input. Software-programmable PD (400KOhm TYP). ENABLE1 is active high. This input controls TPS659037 PMIC internal step-down converter enable. TPS659037 PMIC step-down converters enable and disable is part of the flexible power-up and power-down state-machine. As option, ENABLE1 input can be mapped to any resource (LDOs, SMPS converter, or GPIO) to enable or disable it.	Always

#### 5.2.2 General Purpose clocks

CL-SOM-AM57x features three software controlled general purpose clock outputs which can be used for devices with noncritical timing requirements. For additional details on CLKOUT signals, please refer to the Sitara AM57x technical reference manual. The table below summarizes the general purpose clocks interface signals

**Table 62 General Purpose clock signals**

Signal Name	Pin #	Type	Description	Availability
CLKOUT1	99*	O	Device Clock output 1	Always
CLKOUT2	152*	O	Device Clock output 2	Always
CLKOUT3	97*	O	Device Clock output 3. Can be used externally for devices with noncritical timing requirements, or for debug.	Without "E2"

**NOTE: Pins denoted with "\*" may be used for other interfaces. For details, please refer to section 5.5 of this document.**

### 5.2.3 Flash Write-protection

The EEPROM\_WP signal can be used to prevent accidental corruption of the data stored on the onboard SPI Flash as well as the onboard ID EEPROM. The CL-SOM-AM57x on-board EEPROM is used to store board specific production information while the onboard SPI flash is used to store the boot-loader as described in chapter 0.

**NOTE: The EEPROM\_WP must be used in conjunction with SW to enable write protection. Using the EEPROM\_WP signal alone will not enable write protection.**

**Table 63 Flash Write protection signals**

Signal Name	Pin #	Type	Description	Availability
EEPROM_WP	189	PU33	Active low input to enable onboard EEPROM write protection and allow SPI Flash write-protection.	Always available

## 5.3 Reset

CL-SOM-AM57x supports two reset signals: cold reset input (COLD\_RESET\_IN) and warm reset input (RESETN).

- Cold reset is a non-blockable reset input to the Sitara AM57x SoC, which triggers a full logic reset to CL-SOM-AM57x. The cold reset is a global reset that affects every module in the device. Generally, occurs when the device powers up or an abnormal operation is detected.
- Warm reset is also a global reset, but it occurs when the device is in normal operating state and does not affect all the modules in the device. This is often done to speed up reset recovery time. Warm reset events include software-triggered reset per power domain, watchdog time-out, externally triggered via RESETN input and emulation initiated.

The COLD\_RESET\_IN signal should be used as the main system reset.

**Table 64 Reset signals**

Signal Name	Pin #	Type	Description	Availability
COLD_RESET_IN	171	I, PU18	Active low cold reset input signal. Pulled to 1.8V through 10KΩ onboard CL-SOM-AM57x.	Always available
RESETN	187	I, PU33	Active low warm reset input signal. Pulled to 3.3V through 10KΩ onboard CL-SOM-AM57x.	Always available

## 5.4 Boot Sequence

CL-SOM-AM57x boot sequence defines which interface/media is used by CL-SOM-AM57x to load and execute the initial software (such as U-boot). CL-SOM-AM57x can load initial software from the following interfaces/media:

- The on-board primary boot device (SPI Flash with pre-flashed boot-loader).
- An external SD card using the MMC/SD/SDIO1 interface

CL-SOM-AM57x will query boot devices/interfaces for initial software in the order defined by the active boot sequence. A total of two different boot sequences are supported by CL-SOM-AM57x:

- Standard sequence: Designed for normal system operation with the on-board primary boot device as the boot media.
- Alternate sequence: Designed allow recovery from an external boot device in case of data corruption on the on-board primary boot device. Using the alternate sequence allows CL-SOM-AM57x to boot from an external SD card, effectively bypassing the onboard SPI Flash.

---

**NOTE: If during an alternate boot sequence, the CL-SOM-AM57x cannot load the initial software from the external SD card, CL-SOM-AM57x will fall back and try to load the initial software from the onboard SPI flash.**

---

The initial logic value of ALT\_BOOT signal defines which of the supported boot sequences is used by the system.

**Table 65 Alternative Boot selection signal**

Signal Name	Pin #	Type	Description	Availability
ALT_BOOT	185	I, PD	Active high alternate boot sequence select input. Leave floating or tie low for standard boot sequence	Always available

**Table 66 CL-SOM-AM57x Boot sequences**

sequence	ALT_BOOT	First	Second
Standard	Low or floating	Onboard SPI Flash (Primary boot storage)	
Alternate	High	SD card on MMC/SD/SDIO1 interface	Onboard SPI Flash (Primary boot storage)

## 5.5 Signal Multiplexing Characteristics

Up to 110 of the CL-SOM-AM57x carrier board interface pins are multifunctional. Multifunctional pins enable extensive functional flexibility of the CL-SOM-AM57x CoM/SoM by allowing usage of a single carrier board interface pin for one of several functions. Up-to 16 functions (MUX modes) are accessible through each multifunctional carrier board interface pin. The multifunctional capabilities of CL-SOM-AM57x pins are derived from the AM57x SoC control module.

**NOTE: Pin function selection is controlled by software.**

**NOTE: Each pin can be used for a single function at a time.**

**NOTE: Only one pin can be used for each function (in case a function is available on more than one carrier board interface pin).**

**NOTE: An empty MUX mode is a “RESERVED” function and must not be used.**

**NOTE: The excel file "CL-SOM-AM57x PINMUX " attached to this document.**

**Table 67 Multifunctional Signals**

SODIMM pin	Mode0	Mode1	Mode2	Mode3	Mode4	Mode5	Mode6	Mode7	Mode8	Mode9	Mode9	Mode10	Mode11	Mode12	Mode13	Mode14	Mode15	Availability

## 5.6 RTC

The CL-SOM-AM57x RTC is implemented with external real-time clock IC. The RTC provides time and calendar information. Additionally, a backup battery can keep the RTC running to maintain clock and time information even if the main supply is not present. The backup battery should be connected to the VCC\_RTC power input.

---

**NOTE: VCC\_RTC must remain valid at all times for proper operation of the on-board RTC.**

---

## 5.7 LED

The CL-SOM-AM57x features a single general purpose green LED controlled by GPIO2\_5 signal of the AM57x. The LED is ON when GPIO2\_5 is logic High.

## 6 CARRIER BOARD INTERFACE

The CL-SOM-AM57x CoM/SoM carrier board interface uses the SODIMM-204 edge connector. The SoM pinout is detailed in the table below

### 6.1 Connector Pinout

Table 68 Connector P1

## 6.2 Mechanical Drawings

Figure 4 CL-SOM-AM57x Top

**Figure 5 CL-SOM-AM57x bottom**

1. All dimensions are in millimeters.
2. Max height of components on module Bottom Side is 2.8mm.
3. Baseboard connectors provide 2.8mm board-to-board clearance.
4. Board thickness is 1.0mm.

Mechanical drawings are available in DXF format at <http://www.compulab.com/products/computer-on-modules/cl-som-am57x-ti-am5728-am5718-system-on-module/#devres>

### 6.3 Heat Spreader and Cooling Solutions

CompuLab provides CL-SOM-AM57x with a dedicated heat-spreader assembly. The CL-SOM-AM57x heat-spreader has been designed to act as a thermal interface and should be used in conjunction with a heat-sink or an external cooling solution. A cooling solution must be provided to ensure that under worst-case conditions the temperature on any spot of the heat-spreader surface is maintained according to the CL-SOM-AM57x temperature specifications. Various thermal management solutions can be used with the heat-spreader, including active and passive approaches.

Documentation and CAD drawings for the CL-SOM-AM57x heat-spreader and cooling solutions are provided at <http://www.compulab.com/products/computer-on-modules/cl-som-am57x-ti-am5728-am5718-system-on-module/#devres>.

### 6.4 Standoffs/Spacers

CL-SOM-AM57x has two mounting half holes to physically secure the CoM/SoM to the carrier board. Secure CL-SOM-AM57x to the carrier board by mounting two spacers with any adequate screws and nuts. Spacers must comply with the following specification:

- M2x0.4 thread, 2.2±0.2 mm length

## 7 OPERATIONAL CHARACTERISTICS

### 7.1 Absolute Maximum Ratings

**Table 69 Absolute Maximum ratings**

Parameter	Condition	Min	Max	Unit
Main power supply voltage (VSYS)		-0.3	6	V
Backup battery supply voltage (BACKUP_BAT)		-0.3	6	V
VBUS input		-2	20	V
LDOUSB_IN2 (LDOUSB regulator input voltage in PMIC)		-0.3	20	V

**NOTE: Exceeding the absolute maximum ratings may damage the device.**

### 7.2 Recommended Operating Conditions

**Table 70 Recommended Operating Conditions**

Parameter	Limitations	Min	Typ	Max	Unit
Main power supply voltage (VSYS)	Normal operation	3.8		5.25	V
Backup battery supply voltage (VCC_RTC)		1.4		5.5	V
VBUS input		0	5.0	5.25	V
LDOUSB_IN2 (LDOUSB regulator input voltage in PMIC)		4.3		5.25	V

### 7.3 DC Electrical Characteristics

**Table 71 DC Electrical Characteristics**

Parameter	Operating Conditions	Min	Typ	Max	Unit
Multifunctional Digital I/O					
$V_{IH}$		2			V
$V_{IL}$				0.8	V
$V_{OH}$	$I_{OH}=100\mu A$	3.1			V
$V_{OL}$	$I_{OL}=100\mu A$			0.2	V

### 7.4 ESD Performance

**Table 72 ESD Performance**

PARAMETER		ESD Performance
$V_{ESD}$	ESD stress voltage	$\pm 1kV$ Human Body Model (HBM) $\pm 250V$ CDM (Charged Device Model)

## 7.5 Operating Temperature Ranges

The CL-SOM-AM57x is available with three options of operating temperature range.

**Table 73 CL-SOM-AM57x Temperature Range Options**

Range	Temp.	Description
Commercial	0° to 70° C	Sample boards from each batch are tested for the lower and upper temperature limits. Individual boards are not tested.
Extended	-20° to 70° C	Every board undergoes a short test for the lower limit (-20° C) qualification.
Industrial	-40° to 85° C	Every board is extensively tested for both lower and upper limits and at several midpoints.

## 8 APPLICATION NOTES

---

### 8.1 Carrier Board Design Guidelines

- Ensure that all VSYS and GND power pins are connected.
- Major power rails - VSYS and GND must be implemented by planes, rather than traces. Using at least two planes is essential to ensure the system signal quality, because the planes provide a current return path for all interface signals.
- It is recommended to put several 100nF and 10/100uF capacitors between VSYS and GND near the mating connectors.
- It is recommended to connect the standoff holes of the carrier board to GND, in order to improve EMC.
- Except for a power connection, no other connection is mandatory for CL-SOM-AM57x operation. All power-up circuitry and all required pullups/pulldowns are available onboard CL-SOM-AM57x.
- If for some reason you decide to place an external pullup or pulldown resistor on a certain signal (for example - on the GPIOs), first check the documentation of that signal provided in this manual. Certain signals have on-board pullup/pulldown resistors required for proper initialization. Overriding their values by external components will disable board operation.
- You must be familiar with signal interconnection design rules. There are many sensitive groups of signals. For example:
  - Ethernet, SATA, USB and more signals must be routed in differential pairs and by a controlled impedance trace.
  - Audio input must be decoupled from possible sources of carrier board noise.
- Be careful when placing components under the CL-SOM-AM57x module. The carrier board interface connector provides 1mm mating height. Bear in mind that there are components on the underside of the CL-SOM-AM57x.
- Refer to the SB-SOM-AM57x carrier board reference design schematics.

### 8.2 Carrier Board Troubleshooting

- Using grease solvent and a soft brush, clean the contacts of the mating connectors of both the module and the carrier board. Remnants of soldering paste can prevent proper contact. Take care to let the connectors and the module dry entirely before re-applying power – otherwise corrosion may occur.
- Using an oscilloscope, check the voltage levels and quality of the VSYS power supply. It should be as specified in [section 7.2](#). Check that there is no excessive ripple or glitches. First perform the measurements without plugging in the module. Then plug in the module and measure again. Measurement should be performed on the pins of the mating connector.
- Using an oscilloscope, verify that the GND pins of the mating connector are indeed at zero voltage level and that there is no ground bouncing. The module must be plugged in during the test.
- Create a "minimum system" - only power, mating connectors, the module and a serial interface.
- Check if the system starts properly. In system larger than the minimum, possible sources of disturbance could be:
  - Devices improperly driving the local bus
  - External pullup/pulldown resistors overriding the module on-board values, or any other component creating the same "overriding" effect
  - Faulty power supply
- In order to avoid possible sources of disturbance, it is strongly recommended to start with a minimal system and then to add/activate off-board devices one by one.

- Check for the existence of soldering shorts between pins of mating connectors. Even if the signals are not used on the carrier board, shorting them on the connectors can disable the module operation. An initial check can be performed using a microscope. However, if microscope inspection finds nothing, it is advisable to check using an X-ray, because often solder bridges are deep beneath the connector body. Note that solder shorts are the most probable factor to prevent a module from booting.
- Check possible signal short circuits due to errors in carrier board PCB design or assembly.
- Improper functioning of a customer carrier board can accidentally delete boot-up code from CL-SOM-AM57x, or even damage the module hardware permanently. Before every new attempt of activation, check that your module is still functional with CompuLab SB-SOM-AM57x carrier board.
- It is recommended to assemble more than one carrier board for prototyping, in order to ease resolution of problems related to specific board assembly.

## 8.3 Ethernet Magnetics Implementation

### 8.3.1 Magnetics Selection

Refer to the table below for compatible magnetics. The list of “Qualified Magnetics” contains magnetics verified for proper **functional** operation by CompuLab. Designers should test and qualify all magnetics before using them in an application.

**Table 74 Qualified Magnetics**

Vendor	P/N	Package
UDE	RB1-125BAK1A	Integrated RJ45
UNE	U50{79}G8-09-B122-B12-BT	Integrated, Dual RJ45
YDS	45F-10202GDD2	Integrated, Dual USB + RJ45

### 8.3.2 Magnetics Connection

For magnetic modules connection, please refer to the SB-SOM-AM57x reference design schematics.
