1 INTRODUCTION

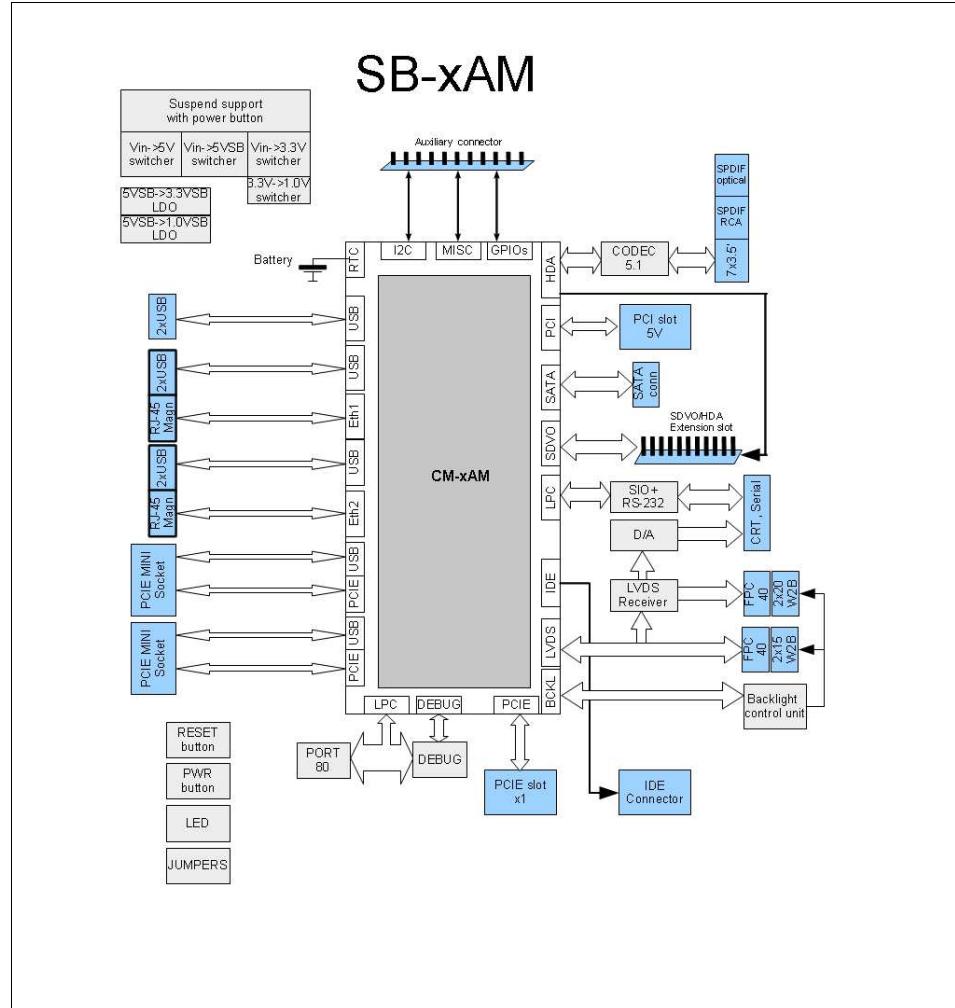

1.1 About This Document

This document is part of a set of reference documents providing information necessary to operate and program CompuLab's SB-xAM Evaluation Platform for use with the CM-xAM Embedded PC Module and found in the Developer section at the CompuLab Web site <http://www.complab.co.il>.

2 OVERVIEW

2.1 Block Diagram

Figure 1 SB-xAM Block Diagram

2.2 SB-xAM Features

Table 1 SB-xAM features

Feature	Description
Display interfaces	<ul style="list-style-type: none"> LVDS with 4-pair (and clock) modes support Parallel RGB interface CRT interface DVI by means of EB-DVI SDVO extension module
Network interfaces	Up to 2 x 1000Base-T, activity LED's

USB	<ul style="list-style-type: none"> • 6 external USB1.1 / USB2.0 ports • 2 x USB2.0 ports routed to the PCIE Mini sockets
Bus interfaces	<ul style="list-style-type: none"> • PCI Express slot • 2 x PCI Express Mini sockets • PCI slot: 32-bit, 33MHz, Rev 2.3, 3.3V levels, 5V tolerance
Audio	Intel High Definition Audio CODEC, 5.1 channel. Optical and coaxial S/PDIF outputs. 7 x 3.5mm audio jack outputs/inputs
External Storage	<ul style="list-style-type: none"> • Parallel ATA (According to configuration of the CM-xAM module installed) • Serial ATA port
General purpose I/O	100 mil header
Module interface	COM Express

Table 2 Electrical, Mechanical and Environmental Specifications

Supply Voltage	12.0 VDC
Power consumption	150mA @ 12.0VDC (in addition to the CM-xAM consumption)
Dimensions	185mm x 190mm x 36mm
Weight	250g
MTBF	> 100,000 hours
Operation temp. (case)	0 to 70 °C (Commercial)
Storage temperature	-40 to 85 °C
Relative humidity	5% to 95% (storage) 10% to 90% (operation)
Shock	50G / 20 ms
Vibration	20G / 0–600 Hz
Module connector insertion/removal	20 cycles

2.3 SB-xAM Part Number Legend

SB-xAM part number format is presented below:

SB-xAM-Lx-A-Ex-Tx

This part number format represents the SB-xAM configuration options available, listed in the following table:

Table 3 SB-xAM configuration options

Feature	Options	Part Number Code
RGB interface: Parallel - for LCD panels Analog - for VGA monitors	(none)	-
	Parallel	L1
	Analog + parallel	L2
5.1 channel audio	No	-
	Yes	A
Ethernet (resource tradeoff, see notes)	(none)	-
	One port	E1
	Two ports	E2
Temperature range	Commercial	-
	Extended	TE
	Industrial	TI

Notes:

Ethernet ports are implemented on the module rather than on the baseboard. The number of Ethernet ports should be specified in baseboard selection for proper routing of resources. It must match this of the module. Ethernet ports share resources with other functions; therefore Ethernet ports should not be assembled if alternative shared resources are required:

- First LAN port is shared with first PCI Express socket
- Second LAN port is shared second PCI Express socket and with IDE connector

3 INTERFACES AND CONTROLS

3.1 Components Locations

Figure 2 SB-xAM Top Components

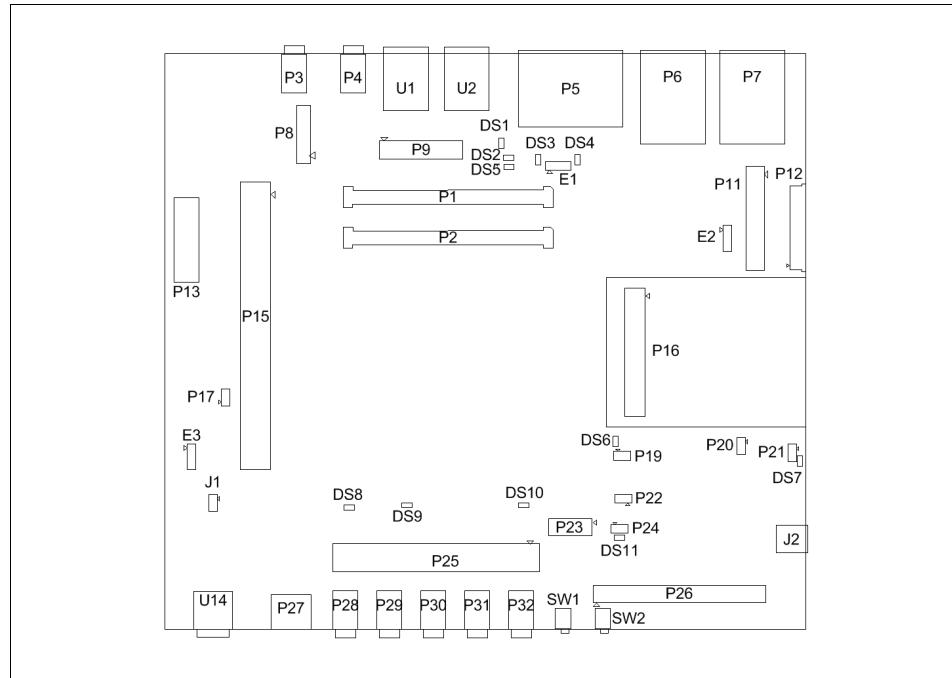

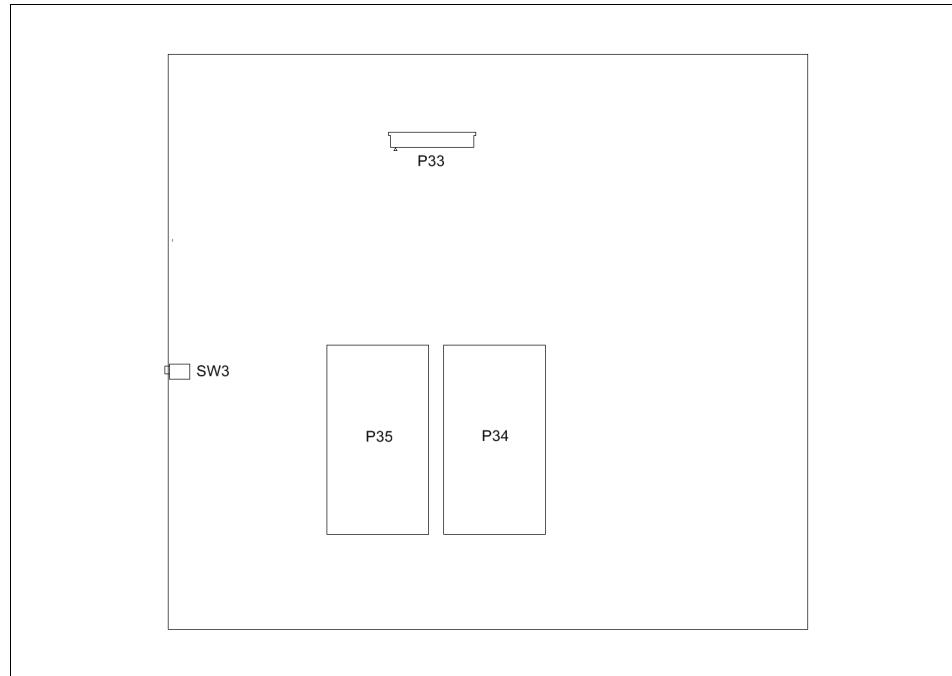

Figure 3 SB-xAM Bottom Components (as seen from top)

3.2 Components Listing

Table 4 User Accessible Components Listing, Top Side

Reference	Type	Description
DS1	LED, green	LVDS power enable indicator
DS2	LED, red	+V3.3SBY indicator
DS3	LED	Not assembled
DS4	LED	Not assembled
DS5	LED, green	SATA activity indicator
DS6	LED, green	+V5 indicator
DS7	LED, green	+V3.3 indicator
DS8	LED, green	Hard drive activity indicator
DS9	LED, green	WLAN activity indicator (device plugged into P35)
DS10	LED, green	WLAN activity indicator (device plugged into P34)
DS11	LED, red	+V5SBY indicator
E1	Header, 3-pin	Not assembled
E2	Header, 3-pin	USB supply jumper
E3	Header, 3-pin	PCI slot VIO jumper
J1	Header, 2-pin	CMOS settings and RTC reset header
J2	Power jack	12V DC power input
P1, P2	Board-to-board	COM Express module connectors
P3	3.5mm audio jack	Line input 2
P4	3.5mm audio jack	Line output 2
P5	Stacked DB-9 / DB-15	CRT output, serial port connectors
P6	Stacked RJ-45 / USBx2	LAN1, USB2, USB3 sockets
P7	Stacked RJ-45 / USBx2	LAN2, USB0, USB1 sockets
P8	SATA signal	SATA interface connector (signal only)
P9	Wire-to-board	LVDS interface connector
P11	Wire-to-board	Parallel LCD (24 bit) connector
P12	Flat PC	Parallel LCD (18 bit) connector
P13	Edge slot	PCI Express slot
P15	Edge slot	PCI slot
P16	Board-to-board	SDVO extension slot
P17	Header, 2-pin	PCI M66EN control
P19	Header, 2-pin	+5V current measurement header
P20	Header, 2-pin	Not assembled
P21	Header, 2-pin	+V3.3 current measurement header
P22	Header, 2-pin	Not assembled
P23	Header, 10-pin	Not assembled
P24	Header, 2-pin	+5VSBY current measurement header
P25	Header, 40-pin	IDE interface connector
P26	Header, 40-pin	Auxiliary signals connector
P27	RCA socket	S/PDIF coaxial output
P28	3.5mm audio jack	Front channels output
P29	3.5mm audio jack	Line input 1
P30	3.5mm audio jack	Center/LFE output
P31	3.5mm audio jack	Surround output
P32	3.5mm audio jack	Microphone input 1
SW1	Push button	RESET switch
SW2	Push button	POWER switch
U1	Stacked USB conn.	USB6, USB7 sockets (not assembled)
U2	Stacked USB conn.	USB4, USB5 sockets
U14	Optical transmitter	S/PDIF optical output

Table 5 User Accessible Components Listing, Bottom Side

Reference	Type	Description
P33	Flat PC	LVDS interface connector
P34	PCIE mini socket	PCIE mini socket
P35	PCIE mini socket	PCIE mini socket
SW3	Push button	Not assembled

3.3 Signal type definition

Table 6 Signal Type Definition

Type	Name	Description
I	Digital Input	CMOS Input pin
O	Digital Output	CMOS Output pin
I/O	Digital Input/Output	CMOS Multiplexed input and output pin to and from SB-xAM
OD	Open Drain	CMOS Open drain output pin, possibly with integrated pull-up
I/OD	Input/Open Drain	CMOS Multiplexed input and open drain output pin to and from SB-xAM , possibly with integrated pull-up
IDIF	Differential (Input)	
ODIF	Differential (Output)	
DIFF	Differential (Bidir)	

3.4 Interfaces and Controls Description

The SB-xAM uses the attached CM-xAM module to implement most of the provided functions. For these functions, the SB-xAM routes the signals from the CM-xAM's miniature connectors to the standard connectors. Each function's description is therefore provided in the CM-xAM Reference Guide. The section below describes only the external interface connectors and other SB-xAM controls.

3.4.1 DS1, LVDS Power Enable Indicator

This green LED indicates the power on the LVDS interface is enabled by the CM-xAM.

3.4.2 DS2, +V3.3SBY Indicator

This red LED indicates the +V3.3SBY voltage is present. This voltage should be always present when 12V power is connected to the SB-xAM.

3.4.3 DS5, SATA Activity Indicator

This red LED indicates the SATA drive is being accessed by the system.

3.4.4 DS6, +V5 Indicator

This green LED indicates the +V5 voltage is present (typically when the system is in the non-sleep state).

3.4.5 DS7, +V3.3 Indicator

This green LED indicates the +V3.3 voltage is present (typically when the system is in the non-sleep state).

3.4.6 DS8, PATA Activity Indicator

This green LED indicates the PATA drive is being accessed by the system.

3.4.7 DS9, WLAN 1 Activity Indicator

This green LED indicates the WiFi module plugged into socket P35 is transmitting or receiving data.

3.4.8 DS10, WLAN 2 Activity Indicator

This green LED indicates the WiFi module plugged into socket P34 is transmitting or receiving data.

3.4.9 DS11, +V5SBY Indicator

This red LED indicates the +V5SBY voltage is present. This voltage should be always present when 12V power is connected to the SB-xAM.

3.4.10 E2, USB Supply

Choose which power rail will be routed to the USB sockets P6, P7, U1, U2 VBUS.

Table 7 USB VBUS Supply Options

Pos.	VBUS
1-2	+V5
2-3	+V5SBY

3.4.11 E3, PCI Slot VIO

Choose which power rail will be routed to the PCI slot VIO supply.

Table 8 PCI Slot VIO Options

Pos.	VIO
1-2	+V5
2-3	+V3.3

3.4.12 J1, CMOS and RTC Reset

In order to reset CMOS and RTC settings on the CM-xAM, first shut down the system and power down the 12V supply. Then short-circuit the J1 for 5-6 seconds. On the next boot default CMOS settings will be applied.

3.4.13 J2, 12V DC Power Input

Connect 12V power supply to this connector.

Note: It's important to use only the certified power adaptor because the CM-xAM module plugged into the SB-xAM receives this 12V supply unmodified.

Table 9 J2 Pinout

Contact	Voltage
Sleeve	GND
Tip	+12V DC

Figure 4 Power Supply Polarity

3.4.14 P1 and P2, COM Express Module Connectors

These connectors pinout is described in the CM-xAM Reference Guide.

3.4.15 P3, Line Input 2

SB-xAM High Definition Audio CODEC's Line Input 2. The function of this socket may be redefined from within the CODEC utility for Windows XP.

This port features a microphone DC reference voltage.

Table 10 P3 Pinout (Line Input 2)

Contact	Signal
Sleeve	GND
Ring	Line Input 2 Right ch.
Tip	Line Input 2 Left ch.

Figure 5 P3, P4 Matching Plug

3.4.16 P4, Line Output 2

SB-xAM High Definition Audio CODEC's Line Output 2. The function of this socket may be redefined from within the CODEC utility for Windows XP.

This port features a microphone DC reference voltage.

Table 11 P4 Pinout (Line Out 2)

3.4.28 P17, PCI M66EN

2-pin 100 mil header. Forces 33MHz mode when shorted.

3.4.29 P19, +V5 Current Measurement

2-pin 100 mil header. Should be normally shorted. Current flowing on the +V5 rail may be measured by placing voltmeter probes over P19, when jumper removed. The measurement result is then calculated in the following way:

$$I_{+V5} = V_{P19} / 0.018$$

3.4.30 P21, +V3.3 Current Measurement

2-pin 100 mil header. Should be normally shorted. Current flowing on the +V3.3 rail may be measured by placing voltmeter probes over P21, when jumper removed. The measurement result is then calculated in the following way:

$$I_{+V3.3} = V_{P21} / 0.018$$

3.4.31 P24, +V5SBY Current Measurement

2-pin 100 mil header. Should be normally shorted. Current flowing on the +V5SBY rail may be measured by placing voltmeter probes over P24, when jumper removed. The measurement result is then calculated in the following way:

$$I_{+V5SBY} = V_{P24} / 0.018$$

3.4.32 P25, IDE Interface

2x20-pin 100 mil IDE header. Normally assembled, but not routed to the CM-xAM interface connectors because of the signals sharing with the second LAN interface. Routing may be altered manually if IDE functionality required and appropriate CM-xAM module is available.

3.4.42 SW1, Reset Button

Front-panel reset switch.

3.4.43 SW2, Power Button

An ACPI power button. Press to signal power event to ACPI, press and hold 5 seconds to force power-off.

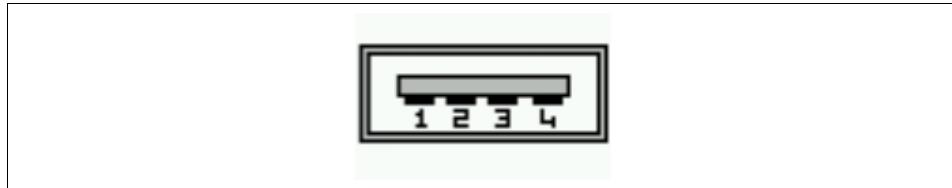

3.4.44 U1 and U2, USB4, USB5, USB6 and USB7

Stacked dual USB type A sockets. U1 not assembled by default because USB6 and USB7 are routed to PCIE Mini sockets. Manual re-routing is possible.

Figure 11 U1 and U2 Pin Numeration

3.4.45 U14, S/PDIF Optical

Standard TOSLINK optical cable socket.

4 FUNCTIONS IMPLEMENTED ON THE SB-XAM

Most of the functions are implemented on the attached CM-xAM module, while the SB-xAM board provides related connectors or headers. Several additional functions are implemented on the SB-xAM itself and are described in this section.

4.1 Audio Codec

The SB-xAM implements an on-board 5.1 audio using the Realtek ALC662 chip.

The codec has seven configurable I/O ports and one SPDIF output provided through RCA and optical connectors.

The SB-xAM's audio CODEC connects to the CM-xAM chipset's HDA channel 0 (SDATAIN_0) output, while the interface's channel 1 is routed to the SDVO connector. Operating systems provide support for switching between two channels (CODEC0 and CODEC1).

4.2 LCD Power Switch

SB-xAM contains power switch for proper power sequencing of the LCD display. It is controlled by LVDS_EN generated by CM-xAM onboard graphics controller.

4.3 Parallel RGB

The SB-xAM implements LVDS-to-parallel RGB using the 24-bit LVDS receiver.

4.4 Analog RGB

The SB-xAM implements on-board analog RGB (CRT) using the FMS3818 video DAC parallel RGB to CRT converter.

4.5 Serial Port

Serial port is implemented on the SB-xAM using the Fintek F71808E Super I/O chip and a RS-232 driver. Default SIO index/data port address is 0x2E/0x2F.

4.6 Video Extension Slot

The SB-xAM implements SDVO interface for external video devices on connector P16.

The EB-DVI extension board provides such functionality for DVI interface. See <http://www.complab.co.il/iam/html/iam-developer.py> for more information and available extensions.

5 OPERATING TEMPERATURE RANGES

The SB-xAM is available with three options of operating temperature range:

Commercial	0° to 70° C
Extended	-20° to 70° C
Industrial	-40° to 85° C

The cards' manufacturing and certification method for each option is explained in the "Operating Temperature Ranges" section of the CM-xAM Reference Guide.

The mating CM-xAM module should be ordered for the same as or better temperature range as of the SB-xAM. For example, there is no benefit in using a SB-xAM manufactured for the industrial temperature range with a CM-xAM manufactured for the commercial temperature range. Such a combination is practically limited to the commercial temperature range.
